

Create healing environments

Scenario Healing

Natural light is said to help the healing process more than artificial lighting, but bacteria and other germs live on the shades, curtains and pull cords in the patient room

Significance Patient outcomes

Studies show reduced stress, less dependence on medication, faster recovery and improved wellbeing when patients have access to natural daylight

Partner SageGlass

Tintable electrochromic glass minimizes glare and manages heat in response to solar conditions without the use of blinds or shades

Integration Electrochromic Glass + Siemens

SageGlass integrates with Siemens Total Room Automation

Benefits Enhanced recovery

Connect patients with the outside, natural world to enhance recovery and wellbeing while providing control over their room environment
