

ENERGYIP® METER DATA MANAGEMENT X

Best of both worlds.

Reduce total cost of operations with an evergreen, proven **Software-as-a-Service meter data management** solution.

Maximize value of AMI, now and in the future

Smart meters represent a major long term investment. There is so much value in the data that only a quality, robust meter data management can make use of. Utilities can improve their billing accuracy, cost base, and customer satisfaction with a proven MDM with the most contracted meters in the world.

A SaaS solution protects this investment into the future. Utilities can introduce new rates with ease, extend their AMI infrastructure, exchange their IT landscape, or address new use cases beyond meter-to-cash.

Reduce operation costs with quality data and automation

With over 99% data accuracy, there are minimal errors or human intervention. Truck rolls and manual investigations are reduced to a minimum. This experience delivers unmatched data quality, by checking and validating data automatically before it reaches the billing system. Well proven analytics identify issues and enable rapid, accurate root cause analysis, leading to fast intervention when needed, identifying leaks, equipment malfunction, possible theft, and other potential problems.

Reduce IT investments

EnergyIP MDM X is structured to provide utility customers with a high function MDM experience with minimal upfront investment and a quick implementation timeline. Monetize your investments over the course of months, not years.

Focus on your core business

EnergyIP MDM x is designed to improve our utility customers' experience in every way from onboarding, operating, maintenance and service. It is completely preinstalled and preconfigured in the AWS Cloud environment, is vendor agnostic by design; and therefore, rapidly connects with any customers' AMI system and billing system.

It's interoperable and easy

It is intuitive to use reducing training and adoption time. Full operation is four months or less. It covers multi-commodity operations: electricity, gas, and water. SaaS includes regular upgrades, new features and maintenance including bug fixes and security updates. Your IT resources can be focused on your business needs. The information collected can be used strategically to achieve your goals.

Have peace of mind

Once the SaaS service is operational it virtually runs itself. The only need for intervention is to address new use cases to capture a new opportunity. EnergyIP MDM X is evergreen, with patching and upgrades included, services are rapidly scalable, and the solution is and will be both regulatory compliant and secure.

SIEMENS

EnergyIP® MDM X - Improve operations without risking quality

With EnergyIP MDM X you do not need to budget for an upfront license payment and IT infrastructure costs. Award winning EnergyIP MDM allows you and your customers to get the most out of your investment in smart metering infrastructure. Imagine a world where everything goes according to plan - your electric, water and/or gas smart meters, your infrastructure, your billing systems. Having this assurance, regardless of your utility size, matters and is exactly what EnergyIP MDM X delivers.

Low risk. Low cost. Low complexity

Over 99% data accuracy in our billing response back to the billing system

Gobally proven

- 100 million smart meters contracted
- 200+ utilities using EnergyIP
- 50+ multi-commodity utilities worldwide
- Ranked #1 in Gartner Magic Quadrant six years in a row

Protect revenue

- Improve billing quality and automation
- Reduce truck rolls
- Service connects/disconnects remotely
- Detect equipment malfunction and theft

Value Beyond

Meter-to-Cash

- Proven technology to assess outage detection and restoration
- Identify, manage and reduce voltage and frequency issues
- Flexible, configurable anomaly detection to analyze an event and time series data

Support Grid Modernization

- Rates to support adoption of renewables
- Data enables impact analysis of DERs and prevention of overloading

Financial Value

- Automate manual processes
- Reduce installation and configure time
- Reduce system integration costs
- Easy to budget
- Vendor independent and integration experts provide ultimate flexibility

Customer Focused

- Improve customer experience, communication and trust
- Receive near real-time outage update
- Successful driven campaign initiatives
- Out-of-box training materials to get started
- 24/7 customer support
