

DESIGO® FIRE CLOUD APPS

Providing an enhanced view and connectivity to fire safety systems **through the cloud**

usa.siemens.com/desigo-fire-cloud

SIEMENS

With Desigo Fire Cloud Apps, accessing your fire safety system has never been easier.

Desigo Fire Cloud Apps provide you and your facility management with real-time views of your fire safety system's performance so you're aware, prepared and can respond quickly to incidents.

Protecting your people, facility and assets against fire incidents takes special care.

That's why every element of protection matters. Your fire safety system achieves an elevated performance level once connected to the cloud; it provides you and your Siemens technicians with information to address issues efficiently and effectively.

Desigo Fire Cloud Apps: Peace of mind to focus on what matters most.

A cloud-based suite of products, Desigo Fire Cloud Apps provide remote access and real-time monitoring of fire alarm systems with secure, encrypted connectivity. Use your smartphone, tablet, or laptop to access the cloud apps, which include:

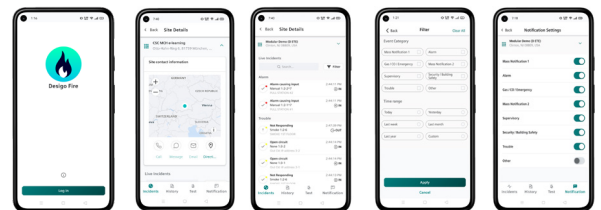

Desigo Fire Portal – See what's happening on your fire control panels with a single view of all system sites. Leverage maps showing system locations that are color coded for status and access each system for real-time detailed data and system inventory.

Be confident knowing that all data is protected with an encrypted connection through the Desigo Fire Portal. Monitor your fire safety system remotely anywhere and anytime.

Use the Desigo Fire Tunnel to remotely connect to a fire safety system. With the Tunnel, Siemens has the capability depending on the situation, to access and make updates to your system remotely to help provide faster and more efficient response, potentially avoiding on-site service calls.

Desigo Fire Connect App – Streamline Desigo Fire Safety device testing and reduce maintenance time and effort using this smart-phone app. With the Desigo Fire Connect App you can access your system easily from a mobile device to be well informed and respond as necessary to keep your building running smoothly. As with the web-based Desigo Fire Portal, you will have access to your system and its status in real-time and receive push notifications that can be tailored to specific system events. The Connect App also allows you to get details and status down to a specific detector.

The Desigo Fire Connect App provides increased service efficiency and system performance insights to technicians and facility managers. While testing detectors, your Siemens technicians can leverage speech-to-text to verify that the right detector is shown at the panel. You can also track maintenance activities and download test reports after detectors have been tested (for UL market NFPA style test reports are available for download).

Benefits of the Connect App include:

- Cloud-based testing of devices
- Higher building compliance due to remote testing capabilities
- Streamlined testing reducing maintenance effort
- Storing the test results and date of last test

Why the Cloud Apps?

Desigo Fire Cloud Apps offers transparency with a live overview of your fire system.

Know what's happening in your fire system - anytime, anywhere. If an incident occurs, you'll get detailed information about the incident's location to make decisions and communicate with your team and stakeholders easily and quickly.

Instant notification of events

Configure Cloud Apps to trigger notifications for events. Receive push notifications, emails and/or texts via the mobile app.

Quick response to incidents

Your Siemens technicians will have the information they need to identify and resolve incidents remotely.

Support for business continuity

Desigo Fire Cloud Apps play an important role in fire system uptime and therefore business continuity. Service maintenance is more efficient and troubleshooting incidents is faster. And, if an incident occurs, detailed reporting provides you with the data and information you need to manage your system and facility.

Benefits for Facility Owners, Managers and Operators.

With Desigo Fire Cloud Apps you can be confident that your fire safety system is highly protected and secure while also enabling:

- Transparency of what's happening on-site.
- Instant notifications and details 24/7 about your site status through Desigo Fire Portal access or Desigo Fire Connect App.
- Remote connectivity without IT infrastructure changes.
- Reduced number of maintenance service requests.
- Enhanced safety, uptime and business continuity via faster issue resolution and more efficient maintenance activities.

With Desigo Fire Cloud Apps, facility owners and building operators can manage one or multiple sites remotely, see system status in real-time, and know that your service technician will respond faster and more informed to service requests. Unlock the power of innovative cloud technology with Desigo Fire Cloud Apps and digitalize your fire safety system to evolve with industry changes.

Benefits of Desigo Fire Cloud Apps

Receive alerts for system events (alarm, trouble, etc.) that you customize for your stakeholders

You and your assigned recipients can receive emails, texts, and/or Connect App push notifications

You can log into the portal or app from your mobile phone, tablet, or laptop to view details

Your team and stakeholders are better and more quickly informed when incidents occur and can proactively manage as needed.

Easy Installation.

Installation of Desigo Fire Cloud Apps is easy through the Cloud Gateway without any changes to your IT infrastructure. Each application is connected remotely and securely with a built-in firewall and encrypted connection. It is UL/ULC approved for remote connectivity.

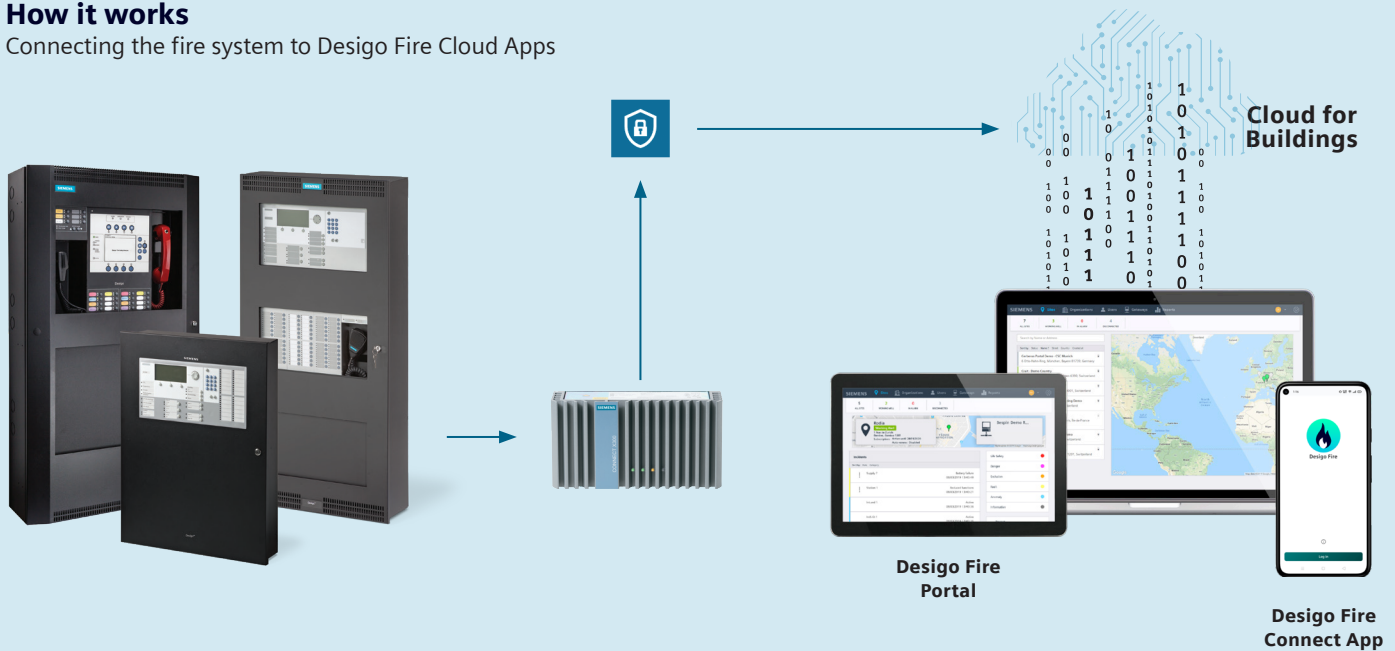

Improve your building's performance.

Ultimately, Desigo Fire Cloud Apps provide transparency of what's happening on-site which

improves efficiency and productivity while also reducing maintenance costs and time. You can be confident knowing that the system is safe and secure. Experience the benefits of Desigo Fire Cloud Apps with digitalization and connect your fire safety system to cloud technology. Desigo Fire Portal offers easy navigation to fire systems, their status, and detailed information.

How it works
