First substations for Siemens Megaproject in Egypt ready for operation

Six substations to transmit the electricity generated by Beni Suef and Burullus power plant. This includes:

- Gas-insulated switchgears
- Transformers
- Control and protection equipment

1st two energized substations will help cover the electricity needs of more than 10 million Egyptians

1 Based on the assumption that these substations will be working at full load of 2500 megawatts (MW) per year
