Siemens Healthcare Diagnostics supplies world’s first Dimension® EXL™ 200 Integrated Chemistry Systems to Alberta Health Services.

Mississauga, ON, April 7, 2011

Standardization of patient reports enhances care by eliminating the need for repeat testing and increasing treatment productivity.

The first of four Siemens Dimension EXL 200 Integrated Chemistry Systems purchased by Alberta Health Services will go into service at the Three Hills Health Centre in April 2011. The purchase of the systems, the world’s first sale of EXL 200s, is part of a contract awarded to Siemens Healthcare Diagnostics by Alberta Health Services (formerly David Thompson Health Region) in 2008 to supply and install clinical chemistry systems in 13 hospital laboratories throughout the former health region. The new systems will set new performance standards and optimize patient tests, saving valuable time and increasing efficiency of the patient testing process.

The EXL 200 systems offer true integration based on consolidation of testing platforms and offer standardization of testing not only between regional sites but also with the core regional laboratory based in Red Deer that also in 2008 purchased two of the new large scale Siemens Dimension integrated chemistry systems (Vista 1500). Standardization improves the portability of results as patients move between general and specialist physicians within the region resulting in the elimination of the need for repeat testing which saves time and money and most importantly means better overall patient care.

The Dimension EXL 200 Integrated Chemistry System is the next level of proven, best-in-class chemistry and immunoassay integration on a single platform with the performance and technology expected from a next-generation system. The four integrated analytical technologies, including the new LOCI® Technology provide reliable results while the easy-to-use Dimension platform ensures trained operators can run any test, any time. Chemistry and immunoassay integration allows simultaneous processing to maximize workflow.

The EXL 200 systems will also be installed at the Stettler Health Centre, Hanna Health Centre and Drumheller Health Centre, with two additional systems purchased for locations yet to be determined.

About Siemens Healthcare Diagnostics

Siemens Healthcare Diagnostics, a global leader in clinical diagnostics, provides healthcare professionals in hospital, reference, and physician office laboratories and point-of-care settings with the vital information required to accurately diagnose, treat, and monitor patients. Our innovative portfolio of performance-driven solutions and personalized customer care combine to streamline workflow, enhance operational efficiency, and support improved patient outcomes.

About Siemens in Canada

Siemens is one of the largest and most diversified companies in the world of electronics and electrical engineering, operating in the industry, energy and healthcare sectors. The company has approximately 5,000 employees in Canada, working to develop and manufacture products, design and install complex systems and projects, and tailor a wide range of solutions for individual requirements. For almost 100 years in Canada, Siemens has stood for technical achievements, innovation, quality and reliability. Sales for Siemens in Canada for fiscal 2010 (ended September 30), were $2.3 billion CAD.

This press release may contain forward-looking statements based on the beliefs of the management of Siemens Canada Limited and its affiliates.
