SGT-A05 Aeroderivative Gas Turbine
More than 1,690 SGT-A05 gas turbines have been sold for industrial use to more than 500 customers in 55 countries, accumulating an impressive 127 million operating hours since its introduction in 1963.

Today, these engines are delivered to our customers through a network of distributors who incorporate the engine into complete generator sets, both stationary and mobile.

All Siemens distributors are carefully chosen for their engineering and manufacturing capabilities and commitment to adhere to Siemens standards for quality and delivery.

**Industrialized Aeroderivative Gas Turbine**

Fast start-up and flexible generation including multiple starts, fast ramp-up and down.

Originally developed for use in aviation, SGT-A05 gas turbines are flexible, compact and lightweight designs that are ideally suited for decentralized power generation offering high efficiency and fast start-up capabilities.

Designed for use in power generation and oil & gas applications, features of the SGT-A05 gas turbine include:

- Lightweight modular construction
- Ease of field repair
- Black start capability
- Hot start capability
- Full power available within 60 seconds
- Load following
- Wide range of fuels in any environmental condition
- High electrical efficiency
At Siemens we understand the rapidly-changing nature of today’s industrial and commercial environment, in which market requirements and operating conditions can vary significantly – and often unpredictably. So we design and shape our products and services to help ensure Siemens customers maintain and increase performance and profitability throughout the life of their power generation project.

**SGT-A05 Aeroderivate Gas Turbine variants**

The SGT-A05 gas turbine variants produce electrical power output between 4 and 6 MW for applications such as base load, co-generation, combined heat and power, mobile power and emergency power.

SGT-A05 variants are fulfilling the requirements of a wide spectrum of applications in terms of efficiency, reliability, flexibility and environmental compatibility.

SGT-A05 gas turbine variants offer low life-cycle costs and an excellent return on investment.

**Low emissions as a gateway to our customers**

Advanced lean-burn combustion technology: The well-proven and reliable Dry Low Emissions (DLE) system offers clean combustion for gas turbines in power generation applications. It achieves emission levels better than 25 vppm NOx and 50 vppm CO.

More than 125 DLE systems have entered service since its introduction in 1994. This system is also available for upgrade during routine overhaul of the SGT-A05.

The Wet Low Emissions (WLE) system utilizes nozzle steam or water injection for gas and liquid fuel operation in order to meet the most stringent environmental requirements.

SGT-A05 gas turbine variants produce low emission levels that meet and exceed customers requirements as well as emission standards around the world.

- Chemical / Rubber & Plastics
- Pulp & Paper
SGT-A05 Gas Turbine Variants

Now even stronger with SGT-A05 KB7HE

Our current offering includes variants of the proven KB5 and KB7 engines:

**SGT-A05 KB7HE**, **SGT-A05 KB7S** and **SGT-A05 KB55**

- Added value to our customers – Leveraging proven technology and reputation
- Improved electrical efficiency reduces fuel usage
- Increased power output increases revenue from the sale of electricity or reduce cost of buying additional electricity off of the grid
- Increased exhaust temperature and flow improves usable exhaust for steam production or direct heat processes

**SGT-A05 Gas turbine variants specification**

**New High Efficiency (HE) Compressor Hardware Upgrades Provide Opportunity to Increase Power and Fuel Economy:**

- Vanes – abradable inner bands
- Case – blade track radius for reduced tip clearance
- Improved interstage sealing
- Includes new generation DLE liners

*Nominal engine performance, ISO, No losses, gaseous fuel 20,400 BTU/lb*
SGT-A05 KB7HE

Taking advantage of the already proven and trusted SGT-A05 KB7S gas turbine, the SGT-A05 KB7HE provides performance enhancements using a High Efficiency Compressor upgrade.

Based on the proven aeroderivative gas turbine technology, the SGT-A05 KB7HE is an outstanding solution for power generation application.

Existing SGT-A05 KB7S easily retrofits to SGT-A05 KB7HE at a cost competitive investment.

SGT-A05 KB7HE is the highest horsepower version (simple cycle) of the SGT-A05 series of engines.

- Higher Power – 8% power increase (8000 SHP) at ISO conditions
- Lower Fuel Burn – 34% Fuel Efficiency (Uninstalled)
- Fuel Flexibility – Same fuel options as current SGT-A05 KB7S Model Specification
- Proven Dual fuel configuration and combustion system
- Heat Rate – 2.6 % improvement

The aeroderivative SGT-A05 KB7HE engine has an overall improvement in fuel consumption

33.2% electrical efficiency
SGT-A05 KB7S

A single stage boost compressor, improved vane cooling, higher strength turbine blades and many other enhancements have been incorporated for improved performance, durability and operating cost.

The aeroderivative design of the SGT-A05 series engine provides a lightweight, modular product that helps lower operating costs through reduced fuel consumption, extended hot section life and ease of maintenance.

Siemens knows there is more to customer satisfaction than manufacturing a quality gas turbine. Beginning with the finest designs, the most advanced manufacturing techniques and rigid verification testing, our team continues to serve our customers with a global network of support.

• Effusion cooled combustion liners
• Core engine commonality with SGT-A05 family
• Addition of single stage compressor boost module
• Natural gas, mid-BTU gas options, liquid and dual fuel configurations
• 5 MW power class
• Competitive operating cost

The aeroderivative SGT-A05 KB7S engine has an overall improvement in fuel consumption 32.3% electrical efficiency

The current engine design is the evolutionary result of continuous improvements since the first release in 1963. This continued product enhancement concept has improved the reliability, performance, power, and efficiency of the SGT-A05 to better serve the needs of our customers.

The aeroderivative design of the SGT-A05 engine provides a lightweight, modular product that helps lower operating costs through improved fuel consumption, extended hot section life and ease of maintenance.

Siemens knows there is more to customer satisfaction than manufacturing a quality gas turbine engine. Beginning with the finest designs, the most advanced manufacturing techniques and rigid verification testing, our team continues to serve our customers with a global network of support.

The SGT-A05 KB5S has accumulated millions of hours of operation since its introduction.
Reference Case: HERA Cogeneration Plant in Bologna

The company operates in the distribution of gas, water, energy and waste disposal in various provinces throughout Italy, including Bologna, Modena, Ravenna, and Rimini.

Location
Bologna, Italy

Commissioning Date
Autumn 2017

Packager
Centrax Gas Turbines, Ltd.

Application
Cogeneration

Gas Turbine Model
2 x SGT-A05 KB5S

Electricity Generated
7.8 MW

Customer Benefits
The new equipment helps to achieve an annual reduction of around 21,000 kg of NOx and 2500 tonnes of CO₂.
The SGT-A05 is known for its high fuel flexibility, which will accommodate a wide variety of possible application scenarios and requirements.

Fuels include, but are not limited to natural gas, liquid fuel (or both) and mid to low BTU gas fuels. Fuel system options include dual fuel, steam and water injection.

Dry Low Emissions (DLE) technology is also available.

In addition to the fuel flexibility, SGT-A05 accommodates a wide variety of customer requirements. The compact design of the engine permits application versatility and ease of removal and replacement. The SGT-A05 measures less than 2.7 meters (8 feet) long and weighs less than 766 Kg (1,690 pounds).

The SGT-A05 is proven to operate in various challenging conditions and locations around the world including the North Sea, West Africa, Siberia, Brazil, Alaska, South East Asia and the desert regions of the Middle East.

The SGT-A05 engine has been shock qualified to Mil-S-901C, which makes it particularly suitable for areas with frequent or severe seismic activity.

Advanced Engineering

Core engine commonality of all SGT-A05 variants

- Highest power density in weight class
- Advanced materials including leading edge additive manufacturing.
  - All SGT-A05 engines are built to meet stringent industry standards including ISO 9001 and AS9100
  - Full power available within 60 seconds from all conditions, including hot restarts, with no need to go to an idle condition
  - Black Start capability
  - Modular gas turbine configuration optimizes spares requirements, minimizes cost of ownership and simplifies engine maintenance

Low Emissions Options

Three combustion systems are available, based on customer need:

- Standard combustion system can operate on liquid or gas fuel
- Wet Low Emissions combustion system utilizes nozzle steam or water
- Dry Low Emissions combustion system achieves better than 25ppm NOx and 50ppm CO (gas fuel only)

Reliable, Easy Installation and Maintenance

Our comprehensive portfolio of services provides low life cycle cost and optimum performance throughout the turbine’s life cycle: Long Term Programs (LTP), Overhaul service, field service, spare parts, service exchange, remote diagnostic service and modernization and upgrades.

The modular, compact design of the SGT-A05 facilitates onsite maintenance, since the modules can be quickly replaced. A direct core engine exchange is possible and can be executed in as little as 12 hours. The proven lightweight industrial design allows an easy and economical transport.

- Simple, inexpensive to maintain
- Rugged, reliable performance with up to seven years baseload duty between full overhaul
- Over 98% demonstrated availability/reliability
- Lightweight and aeroderivative design
SGT-A05 Mobile Power Unit

Power on-site in a single package

SGT-A05 mobile unit

This mobile power unit offers class leading gross electrical efficiency performance in a single trailer package. The SGT-A05 core engine, based on the aero-derivative technology, offers a rugged and robust design which is capable of operating on a wide range of liquid and natural gas fuels.

The unit can be operated in remote locations and can be effective as a micro-grid power source or could be connected to an existing grid network.

- Up to 5.8 MWe of electrical output
- Various configurations and voltage output are available
- Total set up time on site of less than 4 hours
- Rapid power demand response, MPU can deliver full power within 1 minute of starting

SGT-A05 Mobile Power Unit

Fast power
• Ready in less than 4 hours. Rapid deployment time on site

Superior value
• Fuel flexibility: liquid and gas

Trusted technology
• Proven, flexible turbomachinery

Noise Emissions
• Near and far field noise abatement options available
• Based on SGT-A05 aero-derivative gas turbine
• Single-trailer, self-contained design
• On site commissioning time is <4 hours
• Available as DLE or gas/water injection as customer option
• Low-noise option for < 85 dBA near-field and < 65 dBC far field
• Designed for in field servicing including gas turbine exchange

Application modes of operation:
• Prime power for remote operations such as O&G and mining
• Temporary power demand, e.g. military, government, construction, utilities, drilling areas
• Peaking, transmission congestion relief, renewable contact hedging
• Standby emergency power
• Replacement of aged power plants in developed countries (temporary outages)
• Critical process power supply-chemical, pharmaceutical, data hubs, hospitals, universities etc.
• Distributed generation for grid support

Exhaust enclosure
• Exhaust enclosure cover
• Enclosure ventilation exhaust
• Lubrication oil cooler

Switchgear enclosure
• Switchgear
• Unit control panel
• Motor control center
• Starter control panel
• Auxiliary transformer
• Purge air cooler
• Instrument air compressor

Ventilated enclosure
• Gas turbine
• GT lube oil (synthetic)
• Air inlet silencers
• GT enclosure ventilation
• Fire protection system
• Dual gas fuel inlets
• Ventilation air inlets
• Gearbox
• A/C generator

Trailer
• Five axel unit
• Steerable forward two axels
• Lifting forward axel
• Cross wind rated design
• Ten landing legs

Customer supplied
480 V starting generator

SGT-A05 Aeroderivative Gas Turbine
The SGT-A05 packages are designed with noise suppression, access doorway, as well as safety interlocks supporting the health and safety of the operation and maintenance staff. The packages are compact and easily transported, installed and maintained.

Lubricating Oil System
- Common synthetic lube oil system for both engine and package
- Main “engine” lube and scavenge oil pump is driven off the engine accessory gearbox for normal operation and shutdown
- Oil system components are skid-mounted and designed to industry standards
- Optional heaters/coolers to meet the climate needs of the application

Fuel System
- On-skid fuel system includes all components needed to control fuel during start up and operation
- Operates on natural gas, liquid, dual fuel, and low BTU gas with steam and water injection

Low Emissions
Dry Low Emissions (DLE) system is available for all SGT-A05 gas turbine variants

Baseplate
- Sturdy, but small, lightweight footprint
- Design allows easy access for maintenance
- Jib boom provides easy installation or removal of gas turbine

Electrical
Available to meet local standards as needed

Air Intake System
- Provides clean, uniform airflow to the gas turbine
- Includes filter assembly, silencer and flow direction geometry
- Site-specific design minimizes disruption of inlet air
- Filtration systems are available to handle extreme environments – arctic cold, salt water spray, severe heat and dust
- Single to multiple stages handle offshore, coastal and inland sites

Gas Turbine Enclosure
- Acoustic enclosures meet a wide range of requirements and environments
- Factory-completed enclosure can house all auxiliary equipment on engine skid, with piping and wiring completed and tested at the factory
- Completed enclosures shipped with connections intact for simplified installation and commissioning

Water Wash System
- Maintains performance by preventing build-up of contaminants in the engine compressor
- Pump or compressed air system includes storage tanks, pressure gauges, valves and piping
Engine Lease

Engine lease programs are as varied as our customers’ needs. Whether for routine maintenance, or in an emergency, engines can be made available to minimize disruptions to daily operations.

Spares

A worldwide spares inventory allows parts to be delivered anywhere in the world, and as the original equipment manufacturer, Siemens is committed to supplying only the highest quality parts, whether new or refurbished.

Field Service

Twenty-four hours a day, seven days a week, expert field service engineers work to install, maintain and service customer equipment. Their high level of skill allows them to respond rapidly and effectively to a range of situations that may arise. They also provide training and equipment monitoring. Field service is provided by the distributor network or Siemens.

Modernizations and Upgrades

Upgrades to existing equipment are an attractive option for many customers, and a dedicated team of engineers and project managers work to ensure that the customer’s equipment is providing the most power, efficiency and reliability possible. There are currently more than ten different upgrades available for the SGT-A05 gas turbine. Upgrades include SGT-A05 KB7HE upgrade, a conversion to Dry Low Emissions (DLE), dual fuel conversion and more.

SGT-A05 KB7S gas turbine

The global infrastructure of Siemens and its distributors provides customers with the support they need at any time, anywhere in the world. Service centers in every region of the world, combined with a responsive spares program and expert field service representatives, all unite to provide a comprehensive system of service to keep our customers’ equipment running reliably.

Complete Customer Care for the SGT-A05 Gas Turbine

Customer support throughout the life of the engine
A Global Network

SGT-A05 packagers and Siemens maintenance, repair and overhaul centers

Our customers may be located in diverse regions around the world, but they all have one thing in common. They all require timely and accurate support to purchase, install and maintain their SGT-A05 gas turbines and equipment. That’s why we continually invest in our global infrastructure from distributors to repair and overhaul facilities.
