### Rated short-circuit breaking capacity

The table shows the rated ultimate short-circuit breaking capacity  $I_{cu}$  and the rated service short-circuit breaking capacity  $I_{cs}$  for the 3VS motor starter protectors with respect to rated current  $I_n$  and reated operational voltage  $U_e$ .

Infeed is permitted at top or bottom without reduction of rated data. In the short-circuit proof areas,  $I_{cu}$  is at least 100 kA. A backup fuse is therefore not necessary.

In the other areas, when the short-circuit current at the installation point exceeds the rated short-circuit breaking capacity given in the table for the motor starter protectors, the motor starter protector must be protected by a backup fuse. See the following table for the maximum reated current for the backup fuse. With a backup fuse according to the table, the maximum short-circuit current is permitted to equal the rated breaking capacity of the backup fuse.

## Characteristic curves

The characteristic curves are obtained in the cold state and 3-pole loading.

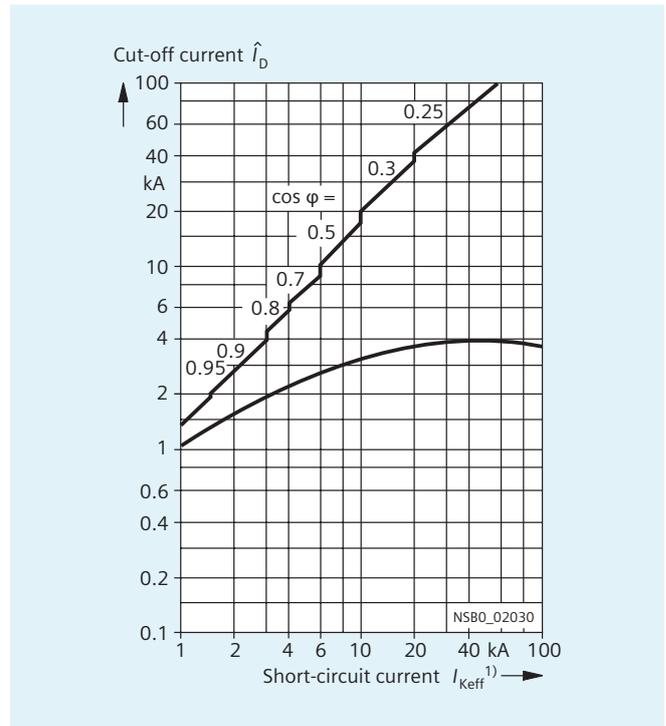

At operating temperature, the tripping time of the thermal releases drops by about 25 %. With 3-pole loading, the deviation in tripping time for 3 times the current and upwards is  $\pm 20\%$  in accordance with DIN VDE 0165

## Characteristic curves for 3VS13

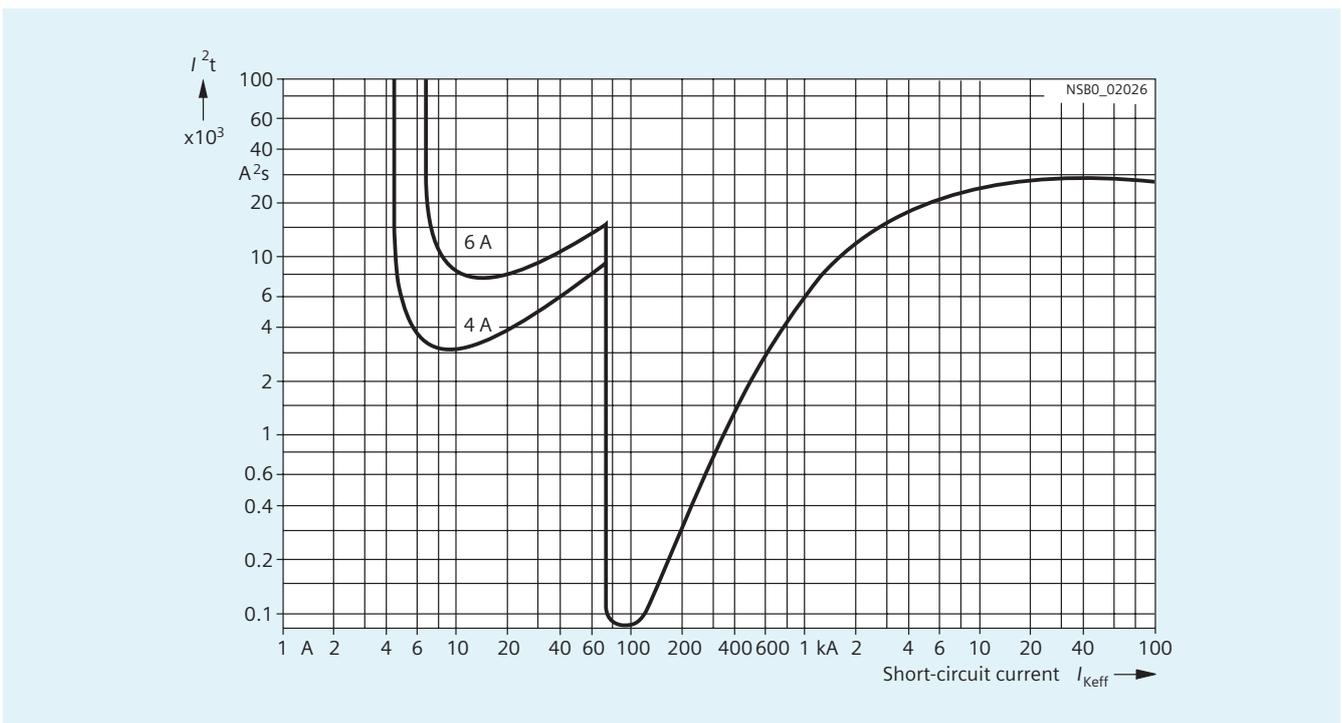

The characteristic curves shown here apply for a 3VS1300-OMK00 motor starter protector with a rated current of 6 A, a current setting range of 4 to 6 A and a tripping current for the instantaneous overcurrent release of 72 A, at a rated voltage of AC 50 Hz, 400 V.

## Space required above arc chutes for 3VS motor starter protectors

Minimum clearance with rated voltage to adjacent parts as well as non-insulated live parts.

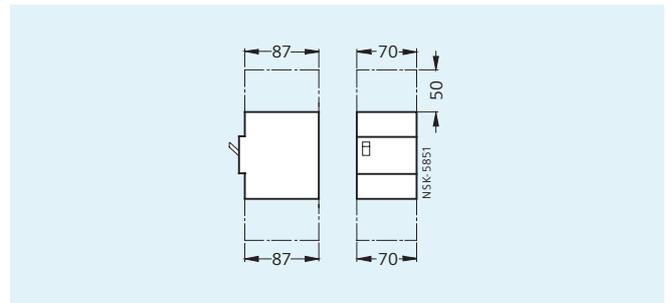

The spacing of minimum 1 cm with 3VS13 between large-surface covers and arc openings should be observed.

### 3VS13

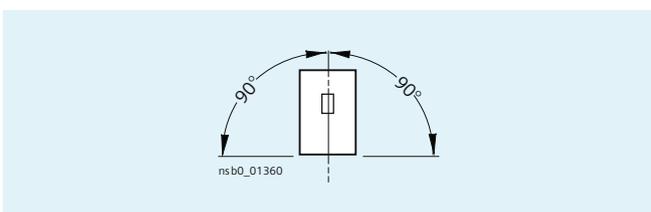

Uninsulated conductors must be insulated within the space required above arc chutes.

### 3VS13

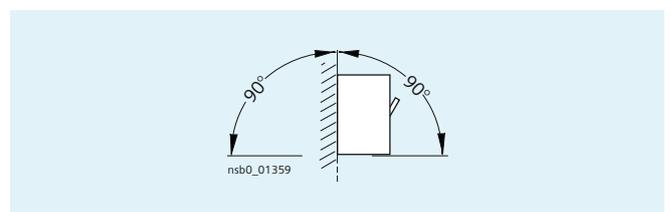

## 3VS Permissible mounting position

3VS13 motor starter protectors permissible mounting position due to position of the operating parts, note DIN 43 602.
