## Creating ideal, new workplaces with smart security

[usa.siemens.com/security](https://usa.siemens.com/security)

As the pace of technology and society change, so too do our opportunities to safeguard businesses and create smarter, safer, more secure spaces. Gone are the days of managing a few card readers and surveillance cameras – the work of creating ideal, new workplaces is vastly different today.

Organizations face new and dynamic security challenges, which go far beyond anticipating threats, controlling access to sites, and monitoring multiple locations. Screening visitors to limit access to healthy individuals, monitoring building occupancy for safe social distancing, and enabling contact tracing – to name a few – now rest squarely on security professionals' shoulders.

### **Forward-thinking organizations recognize that all security systems need connect intelligently**

By intelligently integrating all security components and systems, from simple to complex, it's now possible to create a smart security program that:

- Enables a unified, coordinated security and healthy building strategy
- Creates smooth, seamless building experiences
- Improves situational awareness
- Protects your people, property, business, and reputation

In other words, smart, integrated security solutions create environments that care, environments where people feel healthy, safe, and secure.

### **The journey toward a smart building starts today.**

Smart buildings are uniquely equipped to help solve complex problems like:

- Supporting healthy and secure work environments
- Establishing a path for future technologies
- Enhancing building performance & system reliability
- Managing energy consumption and costs

## As the security landscape changes, rely on smart, integrated security

### Safeguarding your business for more secure spaces

Every day, you must answer key questions: How do we keep our employees, assets, and business healthy and safe? How can we ensure compliance with policies and procedures? How do we safeguard investments?

At Siemens, we can help answer these questions with our smart, integrated security solutions and services, all designed around your business. With our smarter approach, we take what's most important to you and your employees to help transform your business and security operations.

- **Define** – Understand what's driving your business to define a smart, integrated security program that aligns with your objectives and KPIs
- **Design** – Take a holistic approach to situational awareness programs to design the program, systems, and devices that meet your security needs today while preparing your business to prepare for the future
- **Collect** – Collect the right data to build a body of information needed to gain a deeper level of insight and situational awareness of your facility
- **Analyze** – Join your data with our analytics platform to generate transparency and understand patterns of facility use, security system performance, and real-time situational awareness
- **Service** – Ensure your equipment is working properly when you need it most with a range of security lifecycle services, including continuous modernization, maintenance, and software updates

### Rely on Siemens solutions and services as the security landscape changes

As the security landscape changes and threats become more complex, you can rely on Siemens to create and service smart, integrated, and scalable security systems that meet your needs today while preparing you for tomorrow. By unifying security and building systems in ways that enable data analytics and lifecycle services, you not only create an integrated, smart building, you can also create clarity and actionable insights for your entire organization.
