Totally Integrated Power

[siemens.com/tip-cs](https://www.siemens.com/tip-cs)

We support electrical designers in different planning stages with software tools, Revit files for Building Information Modeling (BIM), tender specification texts, planning and application manuals and professional consulting by our experienced technical specialists in many countries. Integrated planning boosts the profitability, safety and reliability of electric power distribution systems. Totally Integrated Power assists electrical designers in finding holistic solutions for infrastructure, building and industrial applications - this also includes critical power supply, for example in hospitals and data centers. Efficiency assessments and power management complement our consulting portfolio.

**Do you need support for power supply system planning for infrastructure and industry buildings?
