Agenda

Case: Raute - Virtual commissioning of veneer patching line

Virtual commissioning project

- Identify
- Start
- Specify

Raute Creating value with Value Hacker and Digital Twin

PROCESS

Get together

Identify

Solve

Super glue

Implement

Continuous improvement

Build a Cross-BU dream team for co-creation.

Identify and prioritize the possibilities and challenges that lie in your Customers' business horizon.

Value Hacker takes full advantage of Siemens' offering and aligns it with Customers' targets.

We proceed as one team.
No valuable data is lost between different operators and phases.

Make sure that the targets are met as planned.

Digital transformation is a never-ending journey.

Virtual Commissioning project Warehouse

The benefits of virtual commissioning for different roles

Product manager

Utilize simulation for sales and marketing

Product development and simulation before sales

Prepare for exceptions before FAT with the customer

Project manager

Enhance communication with customer

OEM capabilities vs Customer expectations

Automation engineer

Develop automation program in a virtual environment

Testing in advance reduces rush and troubleshooting from commissioning

Mechanical engineer

Close collaboration with automation, even remotely

Collision analysis

Virtual prototype testing

Aftersales

Utilize virtual environment for trainings

Less debugs to fix during warranty period = more competitive prices

Safety engineer

Test in advance

Customer trainings

How to start

**Value
Hacker**

Identify customer
needs and business
value

As a service

Fast track to virtual
commissioning

Trainings

Learn by doing

+

**Physical and kinematic
model
NX MCD /
NX MCD Player**

Automation model

TIA Portal + PLCSIM Advanced

- ✓ PLC program
- ✓ Motion control
- ✓ Safety program
- ✓ Communication (e.g. warehouse management system)
- ✓ Diagnostics
- ✓ HMI

Centralized control system for all functionalities

TIA Portal

Warehouse management system

PLC 1

PLC 2

PLC 3

HMI

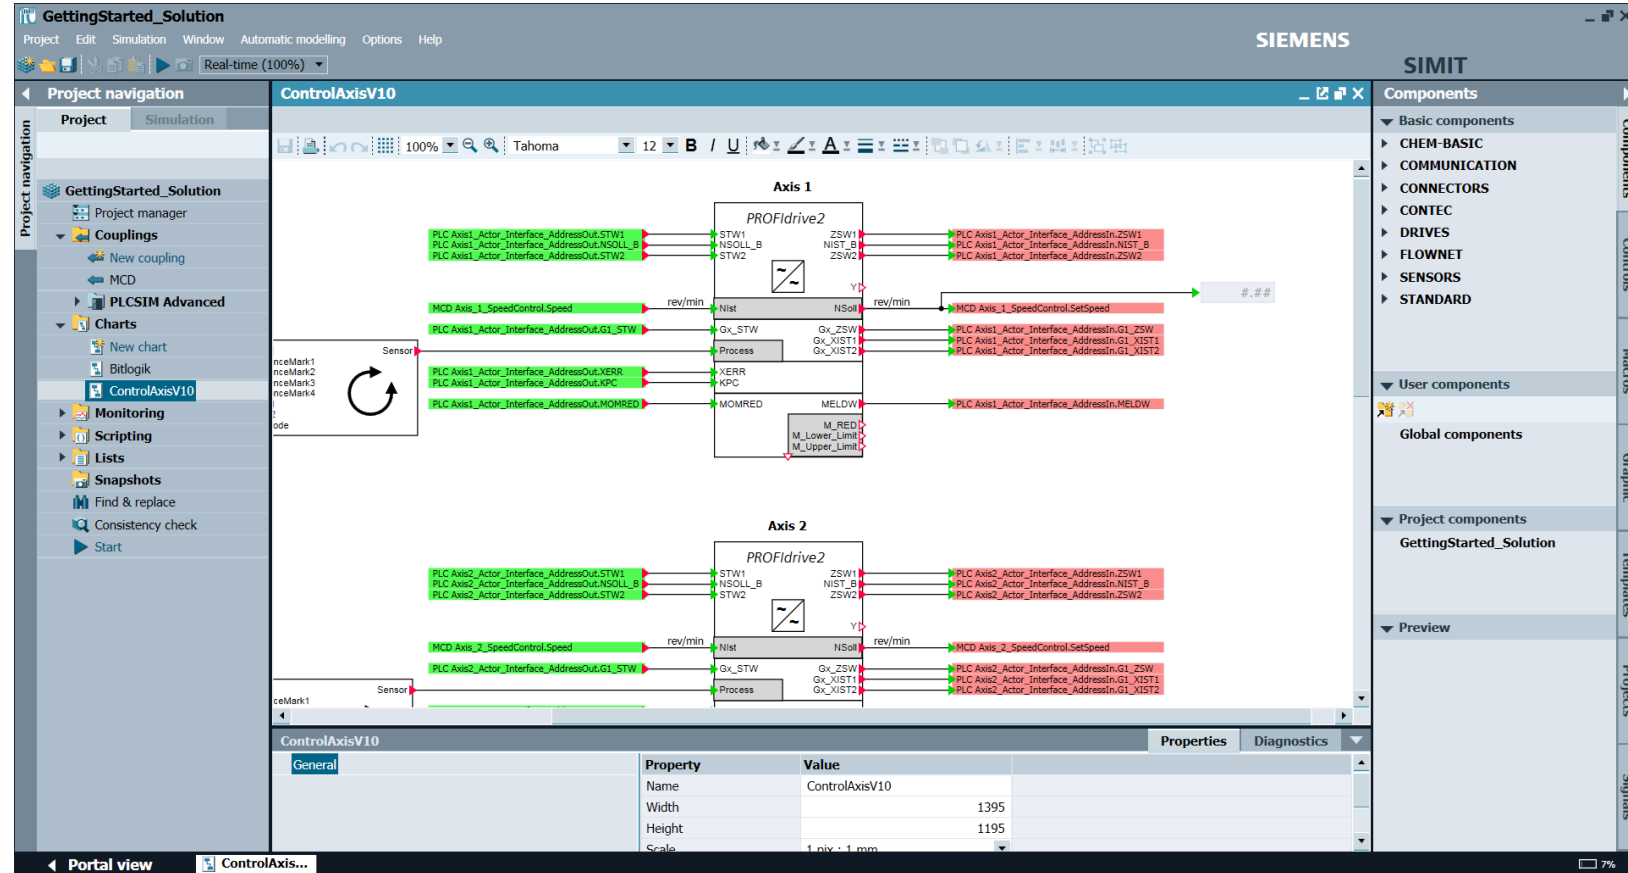

Communication

Electrical and behaviour model

SIMIT

- ✓ I/O simulation
- ✓ Safety Simulation
- ✓ Components
- ✓ Hydraulics
- ✓ Drives with safety
- ✓ Automatic drive model generation
- ✓ Ready made libraries (sios)
- ✓ Buttons
- ✓ Linking the variables between automation and NX MCD

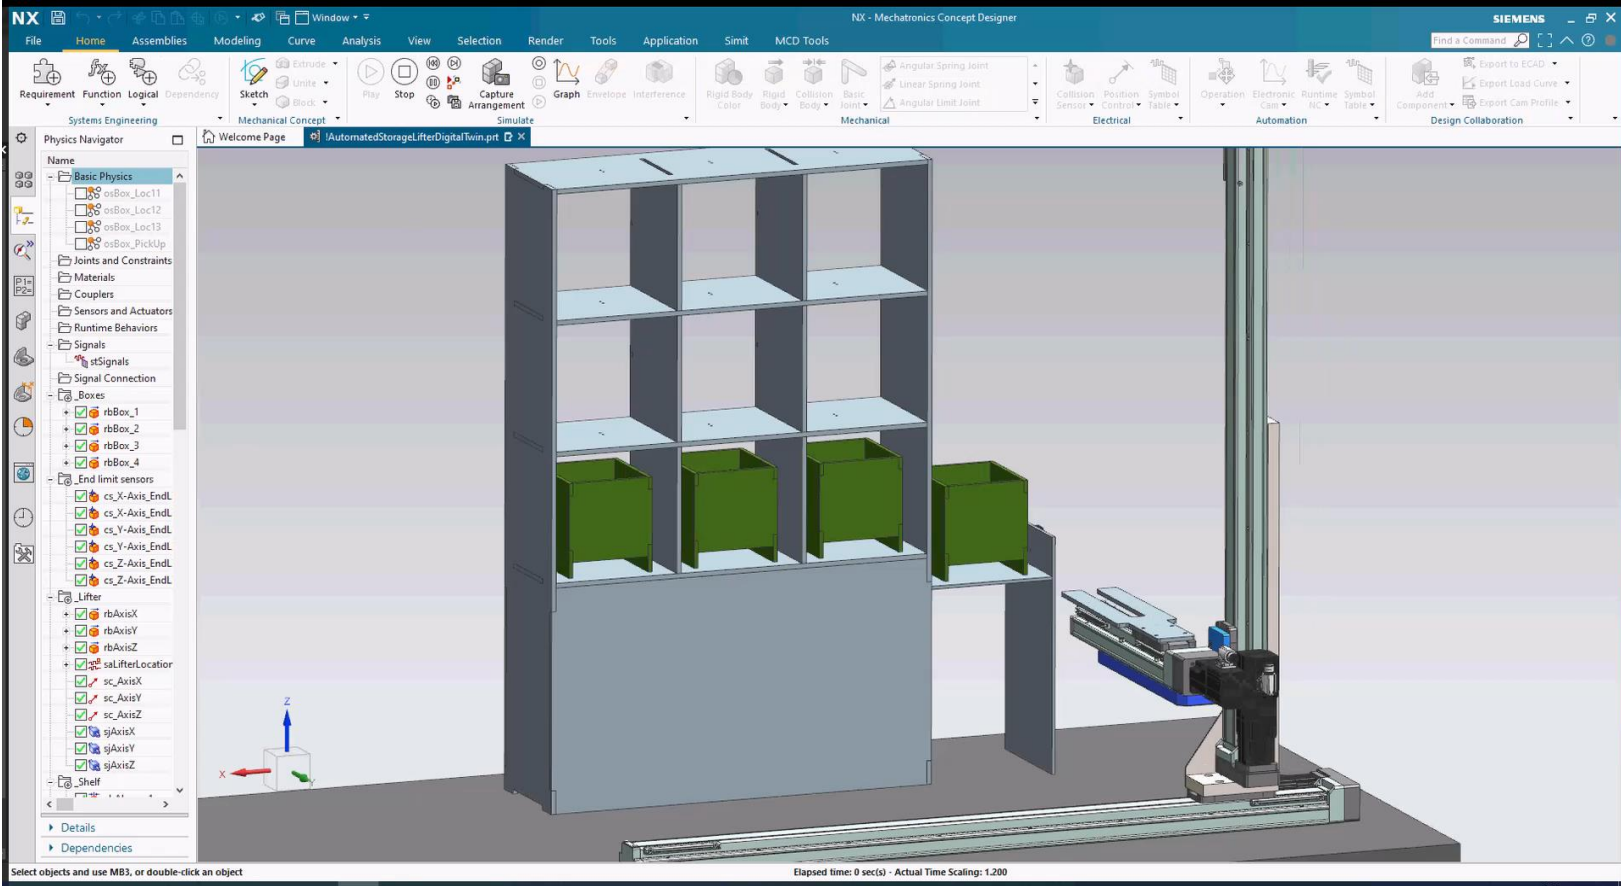

Physical and kinematic model

NX MCD

- ✓ Kinematics
- ✓ Collision bodies
- ✓ Physics (gravity, friction, etc)
- ✓ Sensors
- ✓ Mechanical simulation
- ✓ Material flow

Virtual commissioning with the use of 3D model

Summary

Virtual commissioning projects

- The reason to start the project?
- How to define the scope?
- How to start?

Product manager

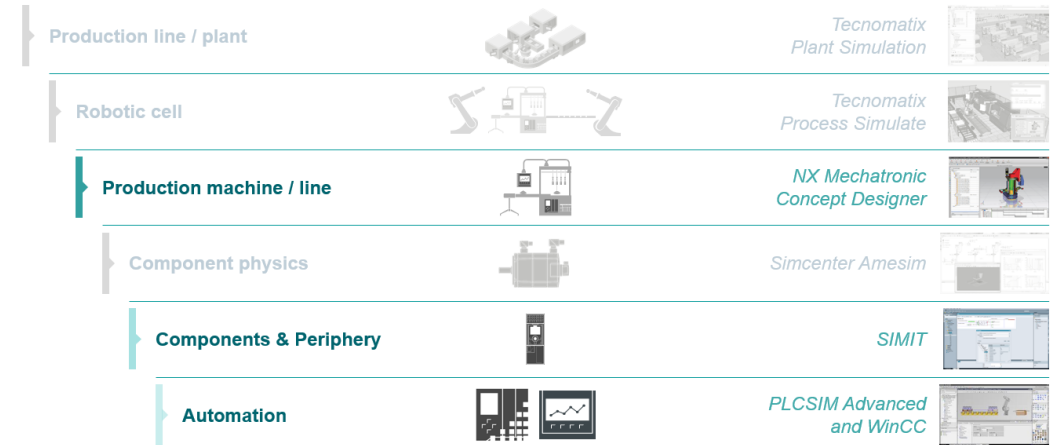

Utilize simulation for sales and marketing
 Product development and simulation before sales
 Prepare for exceptions before FAT with the customer

Automation engineer

Develop automation program in a virtual environment
 Testing in advance reduces rush and troubleshooting from commissioning

After-sales

Utilize virtual environment for trainings
 Less debugs to fix during warranty period = more competitive prices
