

Carpinteria Valley Water District

Upgrading Infrastructure to Provide Renewable Energy and Efficiency

www.usa.siemens.com/finance

Southern California's Carpinteria Valley Water District was established in 1941 to supply safe, drinkable water to all residential, commercial and agricultural community members at a reasonable cost. Following severe droughts over the past five years, the community sought to implement innovative energy-efficient solutions.

Carpinteria Valley,
California

Siemens Building Technologies Americas (BT AM) proposed a long-term sustainable energy solution priced at \$6.5 million which would improve water and energy efficiency. Carpinteria preferred to finance the long-term solution. While the organization requested bids from various financiers, Siemens Financial Services (SFS) was able to provide the most attractive financial offering.

SFS was able to finance the \$6.5 million BT AM energy performance project through a tailored financial package. With Siemens financing and infrastructure solution, the water district was able to successfully implement an innovative solution resulting in customer satisfaction.
