Are you ready to optimize your security system to achieve organizational outcomes?

Safeguarding your people, property, assets, and business continuity.

Traditional security services typically cover preventive maintenance, software maintenance and updates, monitoring, emergency response, and on-call service.

But at Siemens, we understand that every business has its own safety and security goals, and measures progress toward those goals in different ways. Locked within your systems is a wide range of data that can be harnessed in new and innovative ways to help you better align security services and maintenance with your resources and business priorities.

Siemens Security Services delivers an approach that is geared specifically for your priorities and success metrics. No matter your facility type, location, age, or overall system condition, we work together to first understand your goals, identify the services required to achieve them, and define the key performance indicators (KPIs) to measure success.

Security services increase the value and competitiveness of your buildings

We can choose from our comprehensive portfolio of security services to reach your organizational objectives and achieve your desired organizational outcomes. Our network of professional security experts—located across the U.S. in our more than 100 branches—provide responsive service that safeguards the people, property, and assets within your building.
