You protect what matters most to your organization – people, property, and business continuity. Fire and life safety systems that are properly maintained and serviced per standards will help you achieve this goal and minimize your risks.

To provide the highest probability that fire and life safety systems will operate properly in the event of a fire – detect fires, notify occupants, and extinguish flames – the NFPA requires 24x7 monitoring; regular inspection, testing, and maintenance; and timely deficiency repairs. Insurance providers, as well as federal, state, and local authorities having jurisdiction (AHJ) may have additional requirements that must also be met.

Understanding all the requirements and keeping up to date can be very time-consuming and challenging for building owners. Oftentimes, the various AHJs adopt different editions of the standards, and the requirements continue to evolve – not only for standalone systems, but also for the integrated functionality of these systems, which might include fire and life safety, mass notification, security, and building systems. Thus, it’s essential to select a service partner who is knowledgeable and delivers services per standards and requirements specific to your building, business, and jurisdiction.

Benefits of Siemens Comprehensive Fire & Life Safety Services
- Provides expertise of current and evolving fire and life safety requirements, simplifying compliance
- Streamlines coordination of service scheduling and procurement
- 24x7 customer service portal enables efficient management of service activities and reporting
- Technicians utilize TechAdvance+, a test and inspect tool that provides uniform, digital, NFPA-compliant documentation that can be accessed via the customer service portal

From the Siemens UL-listed National Operations Center, fire systems are monitored 24/7 to ensure a timely response that protects people, property, and business continuity.
Comprehensive Fire & Life Safety Services

Siemens technicians are NICET-certified and have expert knowledge of codes, regulations, trends, and technologies. We can help you comply with the latest standards from NFPA, local Authorities Having Jurisdiction (AHJ) requirements, as well as meet the federal, state, and local codes specific to your business.

Siemens Advantages
- Expert knowledge of codes, regulations, trends, and technologies
- Comprehensive services for fire alarm, sprinkler, suppression, and other fire-related systems and equipment with local presence from a global company
- Inspection, testing, maintenance, and documentation in accordance with NFPA standards, as well as federal, state, and local AHJ requirements
- Strong industry participation in fire protection advocacy, research, and code development committees
- NICET-trained (National Institute for Certification in Engineering Technologies) certified technicians on most major systems
- Core competencies in integrated building systems (building automation, security, electrical, lighting, and mechanical)
