SIEMENS

Gain **full transparency** into the status of your DCS

Know where you stand. Identify lifecycle limits, modernization opportunities, and potential risks in your distributed control system with a DCS modernization analysis for SIMATIC PCS 7 and SIMATIC PCS neo.

Keeping your DCS under control is becoming increasingly challenging

As your DCS grows more complex, it becomes harder to maintain a clear view of its system architecture, configuration, and lifecycle status.

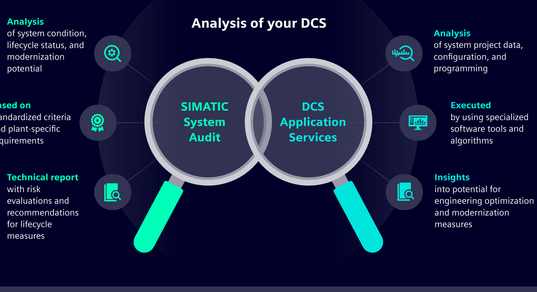

But to make confident decisions, you need transparency into your system's current condition, lifecycle status, potential risks, and areas where upgrades or migration may become necessary.

Let's master this challenge together!

Create in-depth transparency of your system

Gain a comprehensive view of your system and its lifecycle and modernization status through a structured in-depth expert evaluation (SIMATIC System Audit) and an automated DCS project data analysis (DCS Application Services).

Three steps to enhanced system transparency

1 System assessment

- Off-site & on-site assessments by Siemens experts
- Capture of the current condition, configuration, and lifecycle status of your DCS environment

2 Analysis & reporting

- Evaluation of the collected system and project data
- Consolidation into structured reports that show where action is required

3 Strategic decision-making

- Use the insights for your investment and modernization strategy
- Upgrade, evolve to SIMATIC PCS neo, choose a Lifecycle Service Contract or other lifecycle services

Let's keep your DCS available and up to date! Together.

How you benefit

The DCS modernization analysis helps you turn complex system information into clear priorities for action.

In-depth transparency
of system condition, architecture, and lifecycle status

Identification
of risks, gaps, and optimization potential

Recommendations
to improve system condition, availability, serviceability, and upgradeability

Reliable basis
for strategic investment decisions and future service planning
