

Microsoft Authenticator app

Passwordless authentication

Passwordless authentication with Authenticator app

This process will enable you to authenticate yourself to Microsoft services with just your e-mail address and access to the Authenticator app on your Smartphone.

Setup

Pre-requisite: To use this feature your smartphone needs to be Siemens mMobile enrolled. To learn how to enroll your device please find information in the guides for [Android](#) and [iOS](#).

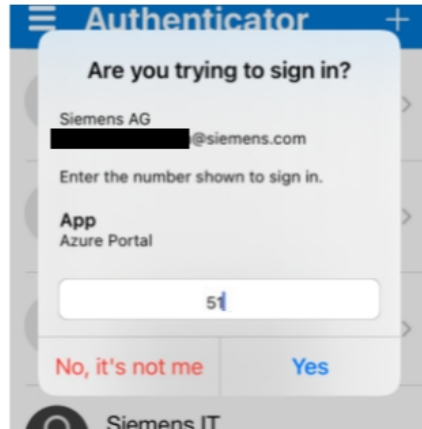

If you are already using the Microsoft Authenticator app, start on step 2.

- 1.** If you don't have the app configured on your device, please **follow the instructions** on this [guide](#), starting on **page 4**. After configured, **restart the app**.
- 2.** Open the Authenticator app and click on your **Siemens profile**. Select **Enable phone sign-in**.
- 3.** Follow the instructions within the Authenticator app (register your device, setup a PIN or Biometrics and your password needs to be typed in to confirm the setup).
- 4.** After finishing the setup wait for approx. 5 minutes for the change of method to be replicated.
- 5.** Done! You can now authenticate without your password (you can still use your password if you like or need it).

On iOS devices

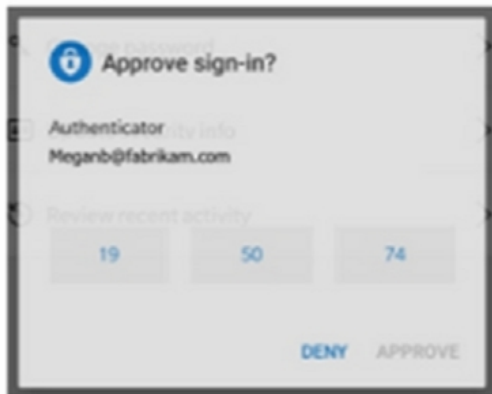

Before

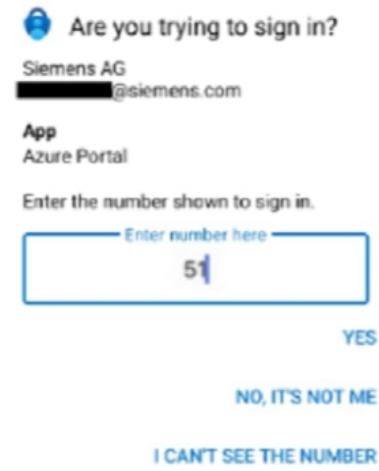

After

On Android devices

Before

After

First authentication

Please use a **private/incognito internet browser window** the first time you use this solution on a Siemens managed device.

1. Visit office.com and proceed with your login by typing your e-mail, as usual. You will see a message with a specific number.
2. On the Authenticator app, enter the specific number.
3. Select **Approve**.
4. Provide your biometric reading or smartphone unlock PIN.

Your authentication is complete.
