Today’s requirements on an industrial communication network are manifold:

- Open and integrated communication across the entire company and across company limits
- Uninterrupted flow of information from the sensor/actuator level all the way to the company level
- Fast data exchange between the plant components
- Availability of information at any location
- Easy and consistent configuration and efficient diagnostics, simple expansions and modernizations
- Integrated security functions which prevent unauthorized access

With the Industrial Ethernet switches from Siemens you can meet your specific challenges in a customized manner – our comprehensive product portfolio always has the right switch for you.

The Siemens Path to Digital Enterprise

Already today, Siemens relies on four-core components to realize the Digital Enterprise: Digital Enterprise Software Suite, Industrial Communication, Industrial Security and Industry Services. On the way to Industry 4.0, industrial communication forms the basis for enabling the data flows needed along the added-value chains, which are required for the combination of the virtual world and the real world. This way you can drastically reduce throughput times with greatly increase flexibility in order to keep up with the increasingly strong trend toward individualized mass production while consistently reducing their consumption of energy and raw materials.

Industrial communication networks: the basis for digitization

Industrial communication is essential for any functioning automation. It provides the infrastructure and the required network mechanisms for a company-wide data exchange. This means: Along the entire value added chain in the digital factory, from the field to the management level – regardless if wired or wireless – local or remote. Against this background, it becomes obvious why efficient industrial networks can only be implemented based on communication standards that ensure a high level of openness and flexibility. And take into account the increasing requirements made on Industrial Security.

Totally Integrated Automation

With Totally Integrated Automation, Siemens is the only supplier of an integrated product and system range for automation in all branches of industry – from incoming goods via the production process all the way to the outgoing goods, from the equipment, through the aggregation level and the industrial backbone all the way to connection to the office network. Siemens offers all components required for industrial communication: From industry-compliant communication processors all the way to network components – also available wireless, if necessary. To achieve the highest level of consistency of the networks and seamless integration of the industrial plants, different Industrial Ethernet switches are used. They are used for the structured networking of machines and plants as well as for integrating them into the overall corporate network. A graduated portfolio of switches all the way to communication processors with integrated switch, offers the best solution for all types of industrial communication in any environment – from production in clean rooms all the way to operation in rough outdoor applications.
Production vs. enterprise network

Industrial communication differs fundamentally from the communication that is used in the office environment. In the office environment, many clients communicate with one server; there are no cross-connections between clients. This type of data transmission can cause bottlenecks and delays when communication links are being established, when too many clients access a server simultaneously.

In an industrial environment, these restrictions are not acceptable for automation because the cyclic processing programs need the latest input data to output corresponding control commands to the components. The applications, communication relationships and network structures must be individually adapted in this case – regardless if for plants in the industry, in the energy sector, in traffic systems or infrastructures. Plus the focus is on optimal utilization of the network capacity and thus plants or machines, and on minimizing possible downtimes.

High availability due to redundancy

Production plants have been designed for and calculated to ensure high availability. This means plant failures often result in cost-intensive downtimes, high restart costs and the loss of valuable data or materials. Redundant control systems or networks in redundant design offer protection from automation system failures. To achieve the extremely fast response times required by industrial companies, Siemens has for many years used standardized network redundancy procedures that support reconfiguration times of a few milliseconds in the event of a fault. This is especially important for process automation in which downtimes must be avoided at all costs. The benefits of these network redundancy processes are taken advantage of here with the SIMATIC PCS 7 distributed control system and PROFINET.

For critical applications which must be fault-tolerant and prevent any delay in communication, Siemens offers different solutions.
## Portfolio

### UNMANAGED

<table>
<thead>
<tr>
<th>Compact Switch Modules CSM</th>
<th>SCALANCE X-000 unmanaged</th>
<th>SCALANCE X-100 unmanaged</th>
<th>SCALANCE X-200 managed</th>
</tr>
</thead>

<td>For a reliable network solution with all equipment details</td>
<td>For all network structures in machine-oriented applications up to linked units</td>
</tr>
</tbody>
</table>

These unmanaged switches, based in design on LOGO!, SIMATIC S7-300/ET 200M or S7-1200, are used for interface extension of the products listed above.

The switches of the SCALANCE X-000 product line are unmanaged Industrial Ethernet switches for implementing a simple machine network with transmission rates of up to 1 Gbps.

The switches of the SCALANCE X-100 product line are rugged unmanaged Industrial Ethernet switches with different port configurations – also available as 19” rack variant, cost-optimized box variant and media converter.

The universal managed switches of the SCALANCE X-200 product line are well suited for setting up line, star and ring structures up to 1 Gbps. They support real-time protocols such as PROFINET or EtherNet/IP. There are many versions, for example, in IP65/67 degree of protection, in ultra-flat design or for setting up bumpless redundant network structures.

### Highlights

- Rugged, industry-compliant design
- The right version for each application
- Investment protection: Existing networks can be extended with new products
- Wide range of usability in small or large networks, even outside the control cabinet
- Avoiding additional training and introduction costs by using standardized Ethernet technology
- Versions for connection of twisted pair and fiber optic cables
- 5 year warranty on all SCALANCE products

### Acting in hard real time
- SCALANCE X-200IRT product line includes compact switches for hard real-time requirements (isochronous real time), for example, in high-performance, isochronous Motion Control applications. These switches can also be used to set up redundant ring structures.

### Convincing performance – modular and powerful
- High functionality and great flexibility: The SCALANCE X-300 products are available as workgroup switches and 19" rack versions or in compact design and extend your plant networks with Gigabit Ethernet power – even under harsh conditions.

### Segmentation on all levels
- Expandable at any time: Thanks to its modular design, the SCALANCE X-400 product line offers maximum flexibility in the automation network—and high performance (1 Gbps) with very small space requirement – compact for DIN rail mounting as well. Large production networks can be easily and clearly segmented in this way.

### Structuring high-performance plants and integrating them into the Office IT
- You can structure your plant network with SCALANCE X-500 19" rack switches as central components. As 19" rack switch, these devices offer complete freedom in the selection of connection media, transmission rates of up to 10 Gbps and different redundancy concepts. Connection your production network to your Enterprise IT – for a network running from the machinery/cells to your backbone layer.

## Managed switches offer in addition

- A network for real time (PROFINET and EtherNet/IP) and standard TCP/IP, eliminating duplicate infrastructure
- High network availability due to integrated redundancy mechanisms (ring structures)
- Reduced downtimes by saving configuration data
- Integration into existing concepts for network security through integrated security functions
- Configuration through WBM or CLI, local or remote
- Diagnostics through LEDs on the device, through WBM or network management through SNMP with SINEMA server
- Integration in the STEP 7 and PCS 7 engineering tools
- Integrated system diagnostics with PROFINET
- High network and machine availability

### Industrial Ethernet switches SCALANCE X: Overview of the functions

**Areas of application / Type of networks / Requires**

- **X-500**: Powerful backbone network with very high requirements on functionality / port density / availability as well as interface to Office IT
- **X-400**: Powerful plant network with high demand on functionality and availability
- **X-300**: Large networks with high demand on functionality and availability
- **X-200**: Networks with high demand on functionality and availability
- **X-100**: Networks with low demand on functionality
- **X-000**: Networks with low demand on functionality and ruggedness
- **CSM**: Networks or interface extension for SIMATIC S7-300, S7-1200, LOGO!

* applies to selected versions

### SCALANCE XC-200
- Compact design
- Metal/plastic housing
- Retaining collar
- Up to 24x RJ45 / 2x ST/BFOC, SC or SFP
- Distances up to 200 km via SFPs
- Integrated diagnostics for fiber optic (Fiber Monitoring)
- For PROFINET and EtherCAT applications
- Temperature range -40 °C to +70 °C
- Trackside railway approval EN 50121-4
- Support of virtual networks (VLAN)
- Near Field Communication (NFC)

### SCALANCE XF-200BA
- Flache Bauform mit flexiblen Busadapterkonzept
- Plastic housing
- Up to 4x RJ45 / 4x SC RJ
- Temperature range -40 °C bis +70 °C
- NAMUR NE 21-konform, Conformal Coating, Aufstellhöhe bis 4000 m
- Integration von S2-Devices in ein hochverfügbares R1-System (nur "Y-Switch" SCALANCE XF204-2BA DNA)
- For EtherNet/IP applications (SCALANCE XF204-2BA only)
- Support for VLAN (SCALANCE XF204-2BA only)

---

**Electrical and optical line and redundant ring structures using HRP standby coupling**

- Compact design
- Transmission rate of up to 1 Gbps
- Slot for C-PLUG removable medium for easy device replacement in fault scenario
- Installation in control cabinet, on standard mounting rail, on SIMATIC mounting rail or for direct wall mounting
- Redundant power supply

- High network availability
- Fast mobile diagnostics through smartphone or tablet in existing WLAN
- Use in process automation

- For installation outside the control cabinet
- Outdoors even in areas requiring a high degree of protection and demanding climatic ambient conditions
- When space is restricted
- Support of virtual networks (VLAN)
- Up to 16x M12, of which 4x Power-over-Ethernet (PoE)
- Up to 4x 1 Gbps Ports (SCALANCE XP216 only)
- Metal housing with slim design
- High degree of protection IP65
- Temperature range -40 °C bis +70 °C
- For PROFINET and Ethernet/IP applications
- Slot for C-PLUG removable medium for easy device replacement in fault scenario
- Coated printed circuit boards (conformal coating)
- Variants for railway applications according to EN 50155, EN 45545 (EEC variants)
- Motor vehicle approval e1/E1
- For critical applications that require fault tolerance in connection with system redundancy: For very short reconfiguration times of the network
- In process automation or power distribution plants
- For seamless networks with PRP/HSR
- Up to 4x RJ45 ports / 2x FO
- IP20 degree of protection
- Temperature range -40°C to +60°C
- Combo ports and temperature range -40 °C to 70°C (for EEC variants)

SCALANCE X-200 managed

Universal and convenient

- Transmission rate up to 1 Gbps
- Redundant power supply
- Very high network availability
- Easy commissioning, diagnostics and device replacement
- Easy coupling of networks
- For harsh ambient conditions
- Use in hazardous areas

SCALANCE XP-200 trainside and trackside

SCALANCE X-300 managed

Compact high performance

Integration of control cabinets with SCALANCE X-300 into an optical Gigabit ring, under adverse ambient conditions with SCALANCE X-300 EEC

- Compact design
- Rugged metal housing
- Retaining collar
- Support of virtual networks (VLAN)
- Redundant power supply
- High performance and network availability
- Use in railway applications
- No need for additional network components and cabling
- Easy network configuration and network extension
- Flexible adaptation to different network structures
## SCALANCE XR-300 managed
### Flexible high performance

### Electrical variants:
- RJ45, M12, VD (Variable Distance)
- Optical versions: SC, ST/FOC
- Variants for plug-in transceivers
- Variants with conformal coating

### Rugged metal housing
- Support of virtual networks (VLAN)
- Modular with media modules
- Redundant power supply

- High performance and network availability
- Use in railway applications
- Easy network configuration and network extension
- Flexible adaptation to different network structures

<td>SCALANCE XM-400</td>
<td>Port Extender</td>
</tr>
</tbody>
</table>

- For high-performance plant networks
- For communication in Layer 3 networks
- For flexible plant networks
- Can be extended up to 24x ports (with port and function extender)
- 4x or 8x combo ports, optionally RJ45 or ST/BFOC, SC or SFP
- Near Field Communication (NFC)
- Transmission rate of up to 1 Gbps
- Temperature range -40 °C to +70 °C
- 8x RJ45 ports with PE408
- 8x RJ45 ports with Power-over-Ethernet with PE408 PoE
- 8x SFP slots with PE400-8SFP
- Temperature range -40 °C to +70 °C

SCALANCE X-400 managed

Powerful networking of plants

- Compact design
- Retaining collar
- Can be extended with modules
- Optical connection of layer 3 functionality
- Installation in control cabinet, on standard mounting rail, on SIMATIC mounting rail
- Support of virtual networks (VLAN)
- Console port
- Redundant power supply

- High performance and network availability
- Fast mobile diagnostics through smartphone or tablet in existing WLAN
- Easy expansion of the network
### Power Supplies
- Power supplies for 54 V DC supply for Power-over-Ethernet according to IEEE 802.3at
- Input current 24 V DC for PS924 PoE
- Input current 85 - 265 V AC for PS9230 PoE
- High power for connected terminal devices possible (up to 30 watts)
- Temperature range -40 °C to +70 °C

### Plug-in transceiver
- Optical connection to cables with LC connectors
- Transmission rates 100 or 1000 Mbps
- Can be used in conjunction with SCALANCE XM408-8C, XM416-4C and PE400-8SFP
- Temperature range -40 °C to +85 °C
- Variants with conformal coating

### Pluggables
- Optical connection to existing cables with SC or ST/BFOC connectors
- Transmission rates 100 or 1000 Mbps
- Can only be used in conjunction with SCALANCE XM408-4C
- Temperature range -40 °C to +85 °C

### Accessories

- **S7-400H**
- **OS Server**
- **SCALANCE XM408-8C**
- **SCALANCE X310**
- **IPC with CP 1613 A2/CP 1623**
- **SIMATIC ET 200M**
- **Redundant control - S7-400H**
- **PROFIBUS**

**Expansion of the network without tools**
**Extension during operation (hot swappable)**
**No need for additional network components and cabling**
**Space-saving design**
**Distances up to 200 kilometers**
## SCALANCE X-500 managed

### Flexible High Performance

<tr>
<td>For structuring high-speed production networks with connection to the Enterprise IT</td>
<td></td>
<td></td>
</tr>
<tr>
<td>For transmission of high data rates (10 Gbps))</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- For large scales (24 ports)
- Overall height 1 HU
- 24x RJ45 ports with transmission rates of up to 1 Gbps
- 8x combo ports, optionally RJ45 or SFP
- Temperature range 0 °C to +50 °C

- For large scales (26 ports)
- Overall height 1 HU
- 2x SFP+ ports with 10 Gbps
- 26x RJ45 ports with transmission rates of up to 1 Gbps
- 8x combo ports, optionally RJ45 or SFP
- Temperature range 0 °C to +50 °C

### Highlights / Features

- 19” design in different height units (HU)
- Rugged metal housing
- Support of virtual networks (VLAN)
- Modular with media modules or SFP and SFP+ plug-in transceivers
- Redundant power supply
- Console port

- Very high performance and network availability
- Granular network extension to 10 Gbps during operation
- Flexible adaptation to different network structures

Connection of automation networks to the Office IT over the Industrial Ethernet backbone
Accessories

**SCALANCE XR528-6M**
- For large scales (28 ports)
- Up to 6x 4-port media modules for electrical and optical connections
- Overall height 2 HU
- 4x SFP+ ports with 1 or 10 Gbps
- 24 ports with transmission rates of up to 1 Gbps
- Temperature range 0 °C to +60 °C

**SCALANCE XR552-12M**
- For very large scales (52 ports)
- Up to 12x 4-port media modules for electrical and optical connections
- Overall height 3 HU
- 4x SFP+ ports with 10 Gbps
- 48 ports with transmission rates of up to 1 Gbps
- Temperature range 0 °C to +60 °C

**Media modules**
- 4-port media modules
- Electrical and optical variants
- Can be used in SCALANCE XR552-12M and XR528-6M
- Temperature range 0 °C to +60 °C

**Plug-in transceiver**
- Cables with LC connectors
- SFP plug-in transceiver with transmission rates 100 or 1000 Mbps
- SFP+ plug-in transceiver with 10 Gbps
- Temperature range -40 °C to +85 °C
- Variants with conformal coating
Switches ... and more

C-PLUG/KEY-PLUG

Update your network components to minimize plant downtimes.

The KEY-PLUG removable medium allows you to enable additional functions especially for industrial use.

The C-PLUG is used for fast and easy device replacement when an error occurs through automatic backup of configuration data.

The KEY-PLUG supports the C-PLUG functionality and is also used for extending or retrofitting additional device functions, for example, enabling software extension to Layer 3 switching (routing) for SCALANCE XM-400 and SCALANCE XR-500.

siemens.com/plugs

Mobile diagnostics

Fast mobile diagnostics with smartphone or tablet is possible with SCALANCE XC-200 or SCALANCE XM-400: The address of the mobile website is read by means of Near Field Communication (NFC), a mobile terminal unit starts the browser with this address and offers powerful diagnostics over an existing WLAN.

SIMATIC NET Selection Tool

The SIMATIC NET Selection Tool is your reliable wizard for selecting Industrial Ethernet switches. The selection can either take place directly from the product portfolio or by specifying the technical requirements as well as by type of application. Integrated configurators help you select modules and accessories as well as during checking of correct function and during ordering.

siemens.com/snst-standalone
FastConnect cabling system

Can be assembled on site – easy, fast and without errors. With FastConnect, Siemens has developed a sophisticated fast connection system for cables, connectors and assembly tools that you can use to make changes quickly and without errors on site. FastConnect is available for PROFINET/Industrial Ethernet and PROFIBUS, for RJ45, M12 or Sub-D/RS-485. And also for Fiber Optic (fiber optic cables) ST/BFOC, SC, SC RJ and LC for different lengths.

Network management
SINEMA server

Not only do plant operators lose access to the field devices due to a network failure, but often the field devices cannot communicate with each other either. In the worst case scenario, production will stop completely.

The SINEMA server software was specifically developed for industrial applications. This way automation environments and network can be centrally monitored over SNMP and SIMATIC and PROFINET diagnostics.

All SCALANCE X devices in the entire network can be upgraded simultaneously or component by component to the latest status as required using a centralized firmware management.

Security information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, systems, machines and networks.

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens' products and solutions only form one element of such a concept.

Customer is responsible to prevent unauthorized access to its plants, systems, machines and networks. Systems, machines and components should only be connected to the enterprise network or the internet if and to the extent necessary and with appropriate security measures (e.g. use of firewalls and network segmentation) in place.

Additionally, Siemens' guidance on appropriate security measures should be taken into account. For more information about industrial security, please visit http://www.siemens.com/industrialsecurity.

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends to apply product updates as soon as available and to always use the latest product versions. Use of product versions that are no longer supported, and failure to apply latest updates may increase customer’s exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Security RSS Feed under http://www.siemens.com/industrialsecurity.
