Velaro

Top performance for high-speed.

siemens.com/mobility
Top performance for high-speed

More people. More goods. Fewer resources. There’s no end to the number of challenges facing rail operators today. And providing fast, reliable connections between urban centers across borders calls for a future-ready alternative to the airplane and the automobile. So why not get on board a mature high-performance connection. One that is setting new standards daily and at high speed: Welcome to Velaro!

More than 1.4 billion kilometers of expertise throughout the world
High speed – a key factor to economic success and quality of life across entire regions. But Velaro’s more than ten-year technological edge did not come overnight, and results from more than 1.4 billion kilometers of expertise. Six different international customers are now using vehicles in the Velaro fleet in a total of nine countries. The revolutionary move away from all-traction equipment concentrated in a power car operating in push-pull mode to a distributed traction arrangement was made by Siemens in the 1990s. As a result, the first trainset – the ICE 3® – went into service in time for Expo 2000. And developments have continued ever since. The ongoing evolution of Velaro® is based on our experience in design, production, service and maintenance in day-to-day international service. You can check out the successes for yourself by riding on a Velaro in Spain, Russia, China, Germany, France, Turkey and the UK. Its technology, flexibility, comfort, and cost-effectiveness are sure to impress you.

Variety with a family connection
Be it a high-class solution for discriminating travelers, a trainset with outstanding riding comfort, or a very economical transportation system for large numbers of passengers: The Velaro family outgrew the concept stage long ago. Today, you have an innovative high-speed trainset at your disposal that is way ahead of the rest. The Velaro family is as proven as it is versatile: Completely different variants can be configured from one standard platform. It can be customized in terms of capacity, comfort, and service. The platform is so mature that a Velaro can be rapidly integrated into your operations – today and in the future. A perfect base for increasing your market share and an attractive concept.
Perfecting performance

When it comes to reliability, Velaro pulls no punches. Behind the highly aesthetic exterior lies rock-solid functionality. Pioneering innovations, first-class materials, and the intelligent integration of reliable electrical and mechanical systems pave the way for this superior integrated concept worldwide.
Performance – 24/7
Meet a versatile top performer: The Velaro reaches speeds of up to 360 km/h. Two car body widths, two track gauges, and a flexible number of cars in various configurations have been built and – typical of Velaro – are already in service. Traveling well over 1,000,000 kilometers a year and with punctuality exceeding 99%, Velaro is far ahead of the rest.

Pioneering multiple-unit concept
Velaro is strictly a multiple-unit train-set: The traction system is distributed over the entire train, and all traction components are arranged underfloor. Consequently, the entire length of up to 400 m above the floor is available for use without space being taken up by a power car. That means maximum room for your passengers. The multiple-unit concept also guarantees optimized performance, improved running characteristics, and a high degree of riding comfort. 50% of all the axles are driven. The result is safe operation under all outdoor conditions. Velaro is not phased by low adhesive coefficients and can take gradients as steep as 40% in its stride. The even distribution of weight also reduces the load on individual axles. This lowers the burden on the track and reduces maintenance expenditure on the bogies.

Worked out down to the last detail
Velaro’s level of innovation is evident in the smallest detail: While passengers benefit from the extraordinarily comfortable bogie suspension, an autopilot helps the driver make an energy-saving journey. A state-of-the-art diagnostic system reports data to preventive maintenance via a wireless link. Available options such as a high-performance eddy-current brake ensures for wear-free braking, permanent-magnet synchronous machines for higher energy efficiency and air-cycle air-conditioning for environmentally compatible and agreeable temperatures. And it goes without saying that Velaro complies with the European safety standards and regulations (TSI, EN, and so forth).
Experience shows that a state-of-the-art train has to cater to different passenger and baggage loadings and provide different levels of comfort. The Velaro family does this, and that’s why it is the most versatile and comfortable high-speed platform of its kind.

A balanced combination of direct and indirect lighting provides a uniquely comfortable atmosphere. As an option, individual lighting conditions can be provided via LEDs.

Effective use of travel time: A spacious conference compartment with practical working surfaces give business travelers privacy to focus on work while en route.

Handholds on the seats, a tactile guidance system with seat numbering in Braille, and strips on the vehicle floor ensure passenger safety and guidance when boarding and while the train is underway.

Convenient catering on board: A timelessly contemporary bistro with snacks and beverages offers passengers relaxation and refreshment.
The most options
Spacious, bright, and exceptionally comfortable: Want a benchmark for passenger satisfaction? Then take a journey on board the Velaro. It’s in a class of its own. No annoying noise, no check-ins, no traffic congestion – but full air-conditioning in hot weather. The multiple-unit concept, with two bogies per car, offers maximum useful space in the interior in all train configurations. The results are clear advantages in terms of capacity and plenty of scope for designing interiors.

Exceptional comfort
Comfort and capacity are not at odds in Velaro. Before the train leaves the station, you will notice the large vestibules and spacious baggage racks. The Velaro enables passengers in wheelchairs to board the train independently and move around the train freely. The barrier-free design philosophy also makes traveling easier for older people and families with baby carriages and a lot of baggage. Relax and enjoy your journey in very comfortable seats. Upholstery, armrests, and legroom can be customized to your needs. Even rotatable seats are available if required. This allows all passengers to enjoy the panoramic view while facing the direction of travel.

Appealing infotainment and more
While audio and video entertainment is provided for the passengers, a state-of-the-art information system keeps them up to date. This system combines business with pleasure. For example, passengers can easily consult all the travel information they need on their mobile devices, take advantage of the power outlets for laptops and other electronic devices, or use WLAN. You can have it all onboard if you want it. A GSM repeater permits interference-free mobile phone reception on the train. And, naturally, a CCTV surveillance system for passenger areas ensures utmost security.

Changing flexibly with the seasons
The vacation season is here – and with it lots of baggage. But where is it all going to be stowed? The answer is to adapt to seasonal changes and demands flexibly. The Velaro interior is modular in design: Its furnishings can be altered to suit your needs. Other modules, such as baggage racks, and small galleys with trolley storage space, are also available. You can upgrade to cars with shallower seat pitches, or change from first to second class with ease. We can supply Velaro with the UIC vehicle clearance envelope as well as with wider cars for higher seating capacity. Unlike double-deck designs with their stairs and low ceilings, Velaro retains its high degree of passenger comfort.
Preserving resources

An integral approach is essential when optimizing the cost efficiency of modern rail systems. In addition to next-generation technology and comfort, short amortization periods and environmental compatibility are among Velaro’s top qualities. Minimum service and maintenance costs play a prominent role in vehicle design. So it is not surprising that life cycle costs are equally low.

Optimized maintenance
All Velaro systems are the object of continuous development. This effort leads to reductions in maintenance costs. Trains are also monitored in daily service. Useful information from the field flows back into the engineering process. Improved component accessibility, continually updated maintenance schedules reflecting experience gained in the field, and the high reliability of the Velaro family, all add up to reduced maintenance costs.

A model of energy efficiency
ICE 3 and Velaro E already offered optimized aerodynamics. Masked roof-mounted equipment, the bogies, and the intercar gangways cut energy consumption. Further aerodynamic measures were tested for the Velaro CN. Today’s Velaro family integrates all acquired field knowledge and refines it.

For example, a roof section elevated from the middle of the last car reduces sonic boom in tunnels. Roof-mounted equipment such as HVAC units and braking resistors are fully encased. Spoiler, nose and front section have been aerodynamically optimized. An energy-efficient brake system is also a priority for Velaro. Since the early 1990s, the train’s electric brake has been feeding surplus braking energy back into the power grid. The result is a 10% saving in energy, and a similar reduction in mechanical wear. All in all, this is equivalent to a gasoline consumption of 0.33 liters per seat and 100 kilometers. And that’s impressive!

Significant transport efficiency
Make room for your business expansion plans: Eight cars with two bogies each offer maximum seating capacity over a length of 200 m. Up to 510 seats are possible with classic 1+2 seating in first class, 2+2 seating in second class and a first-class component of approximately 20%. And there’s enough room for around 600 passengers in the high-density arrangement with 2+2 seating and a reduced seat pitch also in first class. In contrast to articulated trains, Velaro with its 16 bogies has considerably more reserve capacity. Thus, two more persons per square meter standing room can be accommodated and carried during peak times.

Wind-tunnel-tested and aerodynamically optimized: Thanks to a 20% reduction in the equivalent air resistance surface, the most recent generation of Velaro trainsets saves even more energy.
Cost-effectiveness thanks to maximum seating capacity

Self-contained unit
(e.g. Velaro)
Maximum space

Articulated train
Shorter cars – more intercar gangways, less space

Equivalent gasoline consumption:
only 0.33 l per seat and 100 km

Usable free space:

100 %
90 %
Building on success

The Velaro family was developed for the international market. It has the attributes of global versatility and a broad service spectrum. Reliable, configured to suit national and international requirements, and always based on a service-proven platform. So put your trust in our global experience. Over 900 high-speed trains equipped with Siemens technology speak for themselves.

Globally adaptable
From Spain to Russia and as far as China: The high-performance Velaro family is operating in four climatic zones, and also demonstrating its adaptability to different track gauges. The Spanish and Chinese versions are based on Europe’s 1,435-mm standard gauge, while Velaro Russia is built for that country’s 1,520-mm broad gauge.

Powering across borders
Velaro is designed as a four-system trainset. This means that it can run on conventional line voltage systems. So you benefit from its border-crossing capability. In Spain, France, Germany, the UK, Switzerland, Belgium, the Netherlands, Russia, China and Turkey – you might as well say all over the world. As experts in the international certification of high-speed trains, we ensure compatibility with the infrastructure, global standards, and smooth integration of state-of-the-art and next-generation train protection and communication systems.
High-speed under the Spanish sun
Breakfast in Madrid, business lunch in Barcelona: What are you waiting for? Velaro E will speed you to your destination in less than 2½ hours. The eight-section, 200-m-long trainsets reach a top speed of 350 km/h with a traction power rating of 8,800 kW. The 625-km run passes not only quickly but also at pleasant temperatures. Velaro E is specially equipped for service in the heat of Spain: Its approximately 25% more powerful, redundant air-conditioning system with separate, dedicated air-conditioning unit for the driver’s cab is designed for outside temperatures as high as 50 °C.

Traveling with class
Club, Preferente, and Turista – these three classes and four service areas offer a lot of room to move around for 405 passengers. The Club class is fitted out with leather and premium class comfort, and the Preferente class has a high-quality interior and individual service at business class level. The cafeteria car marks the transition to the Turista class with customer service center and rooms for train crews and unattended baggage. Turista class passengers can enjoy an unobstructed view of the track ahead in a front lounge.

Relaxing in comfort
Like to sit facing the direction of travel? Thanks to rotatable seats, Velaro E provides this type of seating in all three classes. And when you’ve seen enough of the passing panorama you can relax and watch the big video screen. Passenger information is provided via multilingual LED screens inside and outside. More Siemens systems look after your safety during the journey: the state-of-the-art European signal system ETCS Level 2 and the reliable continuous ATC system (LZB).
New capacity for China
Highly comfortable ride, large seating capacities: Welcome to Velaro CN! The 8- and 16-car, 200- and 400-m-long trainsets are specially tailored for the large numbers of passengers in China. Velaro CN has 30-cm-wider cars and 2+3 seating arrangements to accommodate the transport capacity of 601 and 1,060 passengers respectively. With a traction power rating of 18,400 kW and at a maximum speed of 350 km/h, the Velaro CN is in operation on the Chinese high-speed network.

En route in comfort
Two different classes with catering services are available on Velaro CN. First class has a lounge with rotatable seats facing the direction of travel at both ends of the train. There’s lots to see here as well: A glass partition between the lounge and driver’s cab offers an unobstructed view of the track ahead. First-class passengers can also enjoy exclusive entertainment via video and audio entertainment system.

Tracking customization
Fancy a cup of tea? A hot water dispenser is available in every car. Or how about a bite to eat in the Bistro? The Bistro offers small snacks and beverages and also accommodates the customer service center. You can get the latest news: Information is provided in English or Chinese on LED screens both inside and outside. The automatic train control and signaling systems for Velaro CN are geared to meet the Chinese requirements. The operations control system specially developed by Siemens for the Chinese market is based on the European standard ETCS.
Velaro RUS

High availability for Russia
Snow, ice and subzero temperatures: Russia has an extreme climate indeed. Nonetheless, as of 2009, Velaro RUS will start providing reliable service: 650 kilometers from Moscow to St. Petersburg in only 3.5 hours. It has specially adapted components and systems to cope with the harsh operating conditions in Russia and is backed up by a 30-year maintenance contract.

Capacity meets flexibility
The ten-car trainset accommodates 556 passengers over a length of 250 m and a carbody that is 30 cm wider than the UIC profile. With a traction power rating of 8,000 kW, it reaches a maximum speed of 250 km/h and can be upgraded to 300 km/h. Velaro RUS can be deployed universally. This is due to its two-variant design: as a single-system train for 3 kV DC and as a dual-system train for 3 kV DC and 25 kV AC. Train protection is based on the Russian operations control system Klub U.

High performance at low temperatures
Velaro RUS is made for climatic challenges, such as temperatures ranging form minus 40 °C to plus 40 °C. This is evident from the extra insulation of the car and its specially adapted ventilation and cooling system. Its air intake is on the roof to avoid the hazards of drifting snow, and a more powerful heating system in the interior makes for agreeable temperatures. All the more reason to expand service to the Moscow – Nizhniy Novgorod line.

Contracting party: Russian Railways RZD
Order placed: May 2006, December 2011
Delivery: 2008, 2014
Russian record: 281 km/h
Greatest consistency: 99 % operating availability
A competitive edge for Europe
Attractive reliability and low life cycle costs – for usage in Germany and France. The Velaro D is already equipped for cross-border operation in Europe’s liberalized rail network. Designed as a four-system-capable, eight-unit trainset, it achieves a top speed of 320 km/h with a traction power rating of 8,000 kW.

Attractive flexibility
The Velaro D optimally meets a wide range of mobility requirements. It has a capacity for 460 passengers over its 200-m length. During peak hours, there is a standing room capacity of two people per square meter. Supplementary baggage racks and face-to-face table arrangements can be integrated overnight. Naturally, Velaro takes the needs of passengers with reduced mobility fully into account. Not only can wheelchair users reach their locations safely and independently via wide entries and aisles, but they can also make their way to the adjacent dining car.

Reliable frugality
An intelligent brake control unit distributes the braking power between the pneumatic and generator-type brake systems. As a result, the Velaro D can not only accelerate rapidly, but also decelerate just as quickly and safely. And while wear-free regenerative feedback systems and eddy-current brakes lower life cycle costs, the aerodynamic concept of the new generation reduces energy consumption. It was thus possible to reduce train resistance by around 8 percent despite the large amount of roof-mounted equipment.
Expertise for the Eurotunnel
A 50-km-long tunnel, of which 38 km are undersea and up to 75 m below sea level: The Eurostar e320 once again pushes our most configurable vehicle platform worldwide into new, challenging realms. Used on the London–Paris–Brussels route, the Eurostar e320 supplements the existing fleet that runs through the Channel Tunnel. With a traction power of 16,000 kW, the 400-m-long multi-system train reaches a top speed of 320 km/h.

Trendsetting safety
Resistant to both fire and water: The Eurostar e320 is especially tailored to meet the strict standards and design requirements for tunnel operations. In the event of a fire, the train can still be operated for an additional 30 minutes. Given the tunnel’s ambient conditions of up to 100% humidity and 25°C temperature throughout the year, all components are reliably protected against condensation.

Appealing comfort
Traveling on the Eurostar e320 is an extraordinarily luxurious experience. Trains accommodate up to 894 passengers, with 222 seats in first class and 672 seats in second class. In early 2015, Eurostar ordered an additional seven multi-unit train sets of 400 m based on an existing option.
High speed for Turkey
With a top speed of over 300 km/h, exclusive design and sustainable technology, the Velaro Türkiye helping Turkey to take a massive step into the future. The country is planning to introduce over 100 new high-speed trains in the next few years and extend its network by more than 10,000 kilometers. To meet constantly increasing transportation needs in the shortest possible time, Siemens delivered the first of seven trains that have been ordered in record time: The first Velaro Türkiye arrived in Turkey just 180 days after being commissioned.

De luxe travel
In the newly designed Velaro Türkiye, you can sit back and enjoy the ride. Choose between three classes of travel – Economy Class, First Class or Business-Class – and take advantage of the large on-board bistro and restaurant area, where dining meets the high standards you would expect from Turkish cuisine. Ultra-modern communication and information systems will keep passengers entertained and up to date using wireless technology, with WLAN, UMTS and satellite connections offering a selection of music, videos, e-books, TV programs and news services.

Amazing energy efficiency
The Velaro Türkiye is all about sustainable travel. With its optimized aerodynamics and electric brakes that feed brake energy back into the network, energy usage can be reduced by up to 10%.
Shaping the future

To get maximum performance, you need a partner at your side from the initial decision, through planning and realization, all the way to competent after-sales service. Siemens has been gaining experience and know-how in project management for 160 years. The corporate knowledge acquired and refined in all those years benefits the Velaro as well.

Integrated service
Even the most trendsetting vehicles are only as good as their well-planned integration into the infrastructure and service network. For this reason, we at Siemens offer you comprehensive support ranging from technical care to customized service and diagnosis on up to economical financing and leasing models. And, on top of all that, we will contractually agree to assume overall responsibility for the construction and maintenance of entire rail systems – from tracks to stations and trains. Our aim is to ensure highly available trains and smooth running operations at all times.

Seamless testing
Intensive tests are a matter of course for us. Your trains are thoroughly checked and tested under realistic operating conditions at our Test and Validation Center for rail systems in Wegberg-Wildenrath, a test center certified by the German Federal Railway Authority (EBA). Be it static or dynamic testing, system change and ATP tests, acoustics or leakage tests: Our seamless investigations guarantee maximum investment security and availability right from the start. We test from the first prototype up to the series production train. Why do we do this? Because we love rail-based transportation systems!
Advancing technology

**Bogies**
The tried-and-tested SF 500 bogies of the Velaro family are put through their paces at speeds up to 403.7 km/h and are therefore suitable for running speeds up to 360 km/h. They provide perfect guidance, maximum stability, and outstanding riding comfort – all this has been verified on high-speed routes in Spain, Russia, China, France, Turkey, and the UK.

**Traction equipment**
The Velaro family has a sophisticated drive system with scalable ratings from 8 to 11 MW. Four identical, independent traction units provide outstanding redundancy: The failure of one unit has no impact on the remaining units. And, while the bogie or axle-selective drive unit gives you clear benefits in terms of maintenance, maintenance-free, proven three-phase squirrel-cage asynchronous motors assure high availability. Or, as an alternative, a permanent-magnet synchronous machine combining a higher degree of efficiency with a better power-weight ratio can also be used. The latest IGBT technology allows easy operation in all power systems. The traction converters can be easily fitted with additional braking resistors, regenerative brake, or eddy-current brake.

**Vehicle control system**
The safe and smooth exchange of data between traction units and between two coupled trains is made possible via the train communication network (TCN). The TCN system is fully redundant and has a reduced number of interfaces and subsystems. This increases the availability of the data communication paths and data transparency, reduces data propagation delays, and saves not only hardware, installation dimensions, and weight but also life cycle costs.

**Low life cycle costs**
- High energy efficiency
- Optimized service and maintenance costs
- Low refurbishment expenditures after 10-year or 20-year periods of operation thanks to its flexible and modular design

**Key vehicle features**
- Trainset with distributed under-floor traction equipment
- Tested vehicle design with a high level of customization
- Internationally deployable
- Variable configuration concept: 7-, 8-, 10-, 12-, and 16-car
- Standard version: 8-car, 510 seats, 200 m long, capable of double-running with a total length of 400 m, coupling and separation in minimum time
- Variable passenger capacities and interior furnishings: 460 to 1,243 seats
- European standards (TSI, UIC, EN)

AlwaysConnected
The digital AlwaysConnected solutions enable passengers to use the full range of Internet on Board services, for example for working en route, entertainment, or communicating world-wide. In-seat displays, monitors, and mobile devices provide information about the trip and onboard services, and a wide range of movies, music, and electronic newspapers keep passengers entertained. Operators not only benefit from Internet access fees and localized ads, but driver assistance systems also improve punctuality and make driving energy- and cost-efficient.

Train IT
A powerful IT infrastructure saves money throughout the train’s entire life cycle, improves passenger comfort and helps prevent damage. The fully integrated, modular TrainIT system forms the backbone for innovative plug-in applications such as iCCTV, Internet on Board, passenger assistance, entertainment, diagnosis, maintenance, etc. Standard hardware and interfaces, along with the software based on them, meet the requirements of railway engineers, operators, and passengers. The vehicle control level relevant for homologation is separate from the networks for operators and passengers, so you can respond quickly to changes and enhancements.
Subject to changes and errors. The information given in this document only contains general descriptions and/or performance features which may not always specifically reflect those described, or which may undergo modification in the course of further development of the products. The requested performance features are binding only when they are expressly agreed upon in the concluded contract.
