SINAMICS G120XE

Configured enclosed drive for industry

usa.siemens.com/sinamics-g120xe

Overview of SINAMICS G120XE

The SINAMICS G120XE is an enclosed drive designed specifically for pumps, fans and compressors. This rugged drive is based upon the SINAMICS G120X to best meet the demands of industrial pump, fan and compressor applications, the environment and the power supply system.

A comprehensive range of pre-designed standard options completes the package. Additionally, please consult the factory for any custom options that may be needed.

Depending upon power ratings, the drive enclosure is either a wall-mounted box or a free-standing enclosure. The most common standard options can be accommodated in the base enclosure. A few options including output filters and reduced voltage soft start (RVSS) bypass require an add-on or separate options enclosure.

Attention to detail is evident in the design of the drive. For example, the enclosure ventilation fans are controlled via a relay to run only when needed, i.e. when the drive is running. Not only does this save energy costs, but it also reduces noise levels in the electrical room.

UL listing

SINAMICS G120XE is an enclosed drive listed to UL508A.

Operator interface

The door-mounted Intelligent Operator Panel IOP-2 is a high resolution color keypad that is user-friendly and a powerful operator panel. The IOP-2 allows fast local setup, fault diagnostics and intuitive operation of the G120X and simplifies the adjustment of settings during operation. It features an intuitive central multi-functional sensor control wheel.

For pump, fan and compressor applications, the IOP-2 application wizards interactively guide you without the need to know parameter numbers.

Auto/manual control is done using the membrane keyboard and the central sensor control field and there is a dedicated local/remote button.

Process values can be displayed numerically in technological units. Up to two process values can be displayed graphically as bar graphs. The IOP-2 also allows graphical trending of values.

SIEMENS

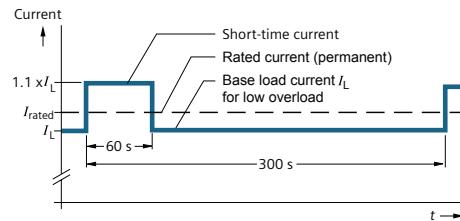

Motor and drive sizing

The Service Factor must be considered for motors operating at Service Factors beyond 1.0. Please consult factory for assistance in sizing the drive.

For motors with ratings larger than the drive, please consult the factory as nuisance tripping may occur if the drive is not properly sized. In sensorless vector control, the rated motor current (FLA) must be at least 1/4 of the rated drive output current. With lower motor currents, operation is possible in Volts / Hz control mode only.

Overload ratings

The SINAMICS G120XE may be operated with either light or high overload duties. The criterion for overload is that the drive is operated with its base load current before and after the overload occurs. Light overload duty is based upon 110% base load current for 60 sec. within a cycle time of 300 sec. or 150% for 60 sec. within a cycle time of 600 sec.

Standard features included with the SINAMICS G120XE

- NEMA 1 enclosure
- UL 508A listed
- SCCR (short circuit current rating) 65 kA
- Circuit breaker disconnect with flange mount operator handle, and mechanical door interlock
- Intelligent operator panel (IOP-2), door-mounted and wired
- Enclosure fans with associated control
- Control power transformer for internal control power
- Up to 500 hp, cable entry top or bottom, line and motor side
 - Line side cable entry top or bottom for the 600–700 hp
 - Motor side cable is standard through the bottom but can be modified to top motor cable with option M78
 - This top motor side cable entry requires an additional cabinet section for 600–700 hp.
- Power module SINAMICS G120X with PWM IGBT inverter

Power circuit configuration

Standard 6-pulse	
Application	Pumps, fans and compressors using the G120X (standard), other industrial applications can be achieved by using the G120E-2 product which uses the PM240-2 power module.
Harmonic performance (depending upon supply impedance)	THID approx. 25–50% (with 3% line reactor option THID approx. 20–30%)
Power supply system/ emergency power	Strong and weak supply systems, emergency power generators may require oversizing due to harmonics
Summary	Basic, compact and low-cost configuration

NOTE: Some of the control unit inputs and outputs may be used for options

Control unit—SINAMICS G120X PN / EIP (Standard)

Application	Pump, fan and compressor drives										
Control mode	V/F (Linear, square law, FCC, ECO), sensorless vector control (SLVC)										
Functionality	<table border="0"> <tr> <td style="vertical-align: top; padding-right: 20px;">Pump-specific</td> <td>Deragging protection, blockage, leakage and dry-running protection, pipe filling mode, cavitation protection, condensation protection, frost protection, multi-pump operation (pump switchover, stop mode, service mode, cascade control mode)</td> </tr> <tr> <td style="vertical-align: top; padding-right: 20px;">Fan-specific</td> <td>Flying restart, automatic restart, fire mode or essential service mode (emergency systems), no load, torque and rotation (belt) monitoring with sensor, skip frequency bands, elapsed time</td> </tr> <tr> <td style="vertical-align: top; padding-right: 20px;">Energy efficiency and performance-specific</td> <td>Eco mode, bypass mode, hibernation or sleep mode, energy / flow calculator, real-time clock and programmable timer</td> </tr> <tr> <td style="vertical-align: top; padding-right: 20px;">Optimize operation and increase system availability</td> <td>Keep running mode, PID controller, dual ramp, multi-speed setpoints</td> </tr> <tr> <td style="vertical-align: top; padding-right: 20px;">Compatible motor types</td> <td>Asynchronous (induction) motors, permanent magnet synchronous motors, synchronous reluctance motors</td> </tr> </table>	Pump-specific	Deragging protection, blockage, leakage and dry-running protection, pipe filling mode, cavitation protection, condensation protection, frost protection, multi-pump operation (pump switchover, stop mode, service mode, cascade control mode)	Fan-specific	Flying restart, automatic restart, fire mode or essential service mode (emergency systems), no load, torque and rotation (belt) monitoring with sensor, skip frequency bands, elapsed time	Energy efficiency and performance-specific	Eco mode, bypass mode, hibernation or sleep mode, energy / flow calculator, real-time clock and programmable timer	Optimize operation and increase system availability	Keep running mode, PID controller, dual ramp, multi-speed setpoints	Compatible motor types	Asynchronous (induction) motors, permanent magnet synchronous motors, synchronous reluctance motors
Pump-specific	Deragging protection, blockage, leakage and dry-running protection, pipe filling mode, cavitation protection, condensation protection, frost protection, multi-pump operation (pump switchover, stop mode, service mode, cascade control mode)										
Fan-specific	Flying restart, automatic restart, fire mode or essential service mode (emergency systems), no load, torque and rotation (belt) monitoring with sensor, skip frequency bands, elapsed time										
Energy efficiency and performance-specific	Eco mode, bypass mode, hibernation or sleep mode, energy / flow calculator, real-time clock and programmable timer										
Optimize operation and increase system availability	Keep running mode, PID controller, dual ramp, multi-speed setpoints										
Compatible motor types	Asynchronous (induction) motors, permanent magnet synchronous motors, synchronous reluctance motors										
Inputs	6 digital (30V), additional 4 on FSH and FSJ 2 analog (-10–10V, 0/4–20mA)										
Outputs	2 digital (Relay, 2A, 30V DC / 2A, 250V AC), additional 1 on FSH and FSJ (30V DC / 0.5A, resistive load) 1 analog										
Integrated Safety (encoderless)	Hardware-based SIL3 Safe Torque Off (STO) function with on / off switch										

NOTE: Some of the control unit inputs and outputs may be used for options

Communication bus interface

Industrial Ethernet	PROFINET, EtherNet/IP, Profibus, Modbus RTU/USS, BACnet MS/TP, WiFi via Smart Access Module (SAM)
----------------------------	---

Electrical

Supply voltages and output ranges	460–480V (optionally 380–480V) 3-phase AC, ±10%, 1–200 hp
Supply systems	Grounded or ungrounded supplies
Line frequency	47–63Hz
Output frequency	Control mode V/F: 0–550Hz, Control mode Vector: 0–240Hz, FSH/FSJ 0–150Hz depending upon control mode
Power factor fundamental approx.	0.93
Drive efficiency	6 pulse: 94–98%
Short circuit current rating	SCCR 65kA
Control method	V/F (Linear, square law, FCC, ECO), sensorless vector control (SLVC)
Fixed speeds	16 fixed frequencies
Skipped frequency ranges	4, programmable

Mechanical

Type of enclosure and color	NEMA 1, optionally NEMA12 (ventilated), ANSI 61 gray
Type of cooling	Forced air ventilation
Noise level L _A (1 m)	65–71dB (A) at 60Hz line frequency
Environmental protection	3C2 environmental rating is standard with 3C3 available as an option

Compliance with standards and certifications

UL listing | Listed to UL 508A

¹⁾ For Standard 6-pulse drives, an allowance of 2.0A (≤ 20 hp), 4.5A (≤ 75 hp) or 6.5A (≤ 200 hp) for auxiliary circuits²⁾ Model numbers with the last digit as 3 indicates the enclosure is the reduced size "MINI" version. The MINI version is only available from 1–10 hp and with very limited options

Standard options

Pre-designed standard options are available to tailor the SINAMICS G120 XE enclosed drive to customer specifications, maintaining short delivery times from the factory.

Standard 6-pulse	
Code	Enclosure options ¹⁾
M12	NEMA12 filters
L50	Cabinet light and outlet
L55	Cabinet space heaters (120V AC)
L56	Motor space heater supply
Y09	Special enclosure paint color [specify color]

Power circuit and protection options	
Code	
L08	Output reactor (450 hp and above requires additional options enclosure)
L10	Output dV/dt filter
L13	Input isolation contactor—coil wired to terminals
L15	Output sinusoidal filter
L24	3% Input reactor ²⁾
L27	Input Fuses (included on ratings 1–20 hp and 450–700 hp (see fuse table on last page))
L28	2 contactor bypass (output/bypass contactors with overload relay/450 hp and above requires additional options enclosure)
L29*	RVSS manual bypass (includes RVSS input and output contactor) In additional options enclosure
L32	Output isolation contactor—coil wired to terminals
L96	Input surge protective device
L98	Motor thermal overload relay (already included in option L28)
L99*	Motor protection relay (Multilin)
M78	Motor cable exit through the top (only applies to 600 hp and 700 hp/top or bottom exit is possible 500 hp and below)
P10	Input voltage monitor (Siemens type 3UG4)

Control options	
Code	
E86	Isolation amplifier for one analog input
E87	Isolation amplifier for one analog output (2nd isolator for 2nd analog output with G60 option)
G79	AB Remote I/O converter to EtherNet/IP ³⁾
K20	Pilot lights (qty. 2), door mounted—run, fault (3rd light for “ready” with G60 option)
K21	Additional local controls (L-R and H-O-A switches, speed potentiometer, Start/Stop push-buttons)
K22	Elapsed time (hour) meter, door-mounted, non-resettable
L87*	Ground fault monitor for ungrounded supplies
L97	RTD monitor for 8x Pt100 temperature sensors
N55	ALL STOP mushroom pushbutton, latching, coast to stop
G60	I/O expansion (additional 2 DI, 4 DO, 1AI and 2AO)
G81	Profibus communications (Profinet standard)
G83	USS, Modbus RTU, BacNet MS/TP communication

Special options	
Code	
N75	Expanded voltage range (380–480V supply system)
U91	cUL listing for Canada
H21	3C3 environmental protection (3C2 standard, not available on FSH/FSJ 450–700 hp)

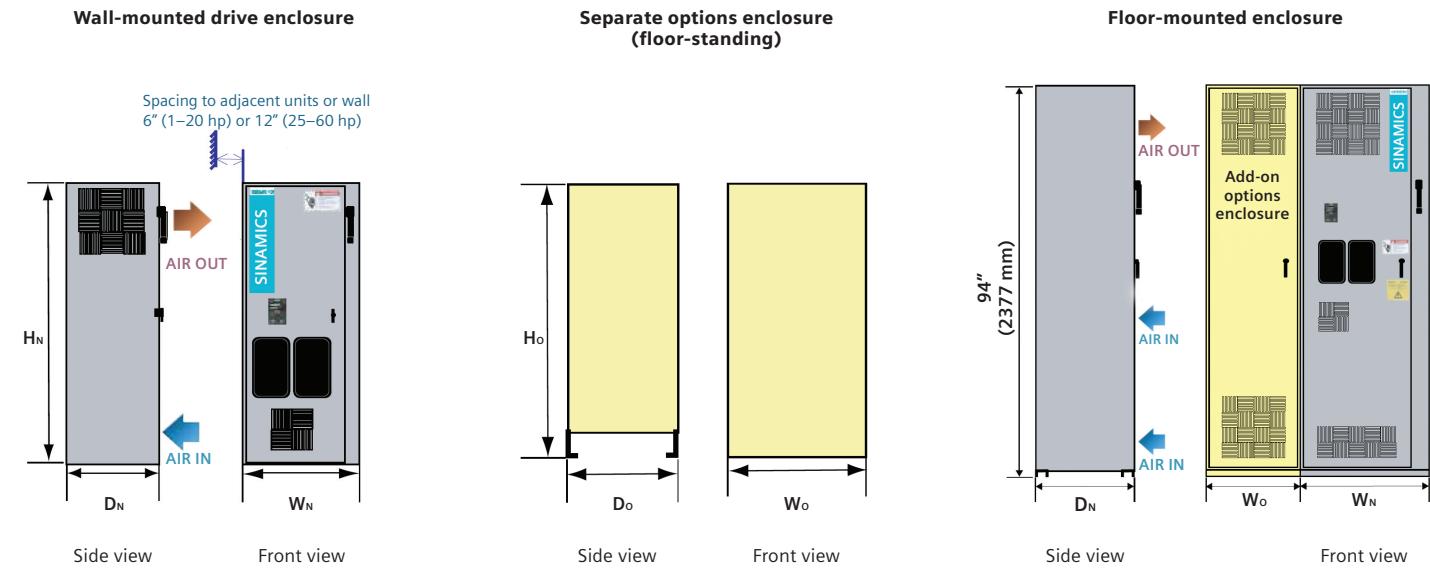

Please consult the factory for additional custom options

* = only for 100–200 hp (floor-standing enclosure)

¹⁾ For wall-mounted drives, the enclosure options listed above are available only for the VFD enclosure itself, not for the separate options enclosures.

²⁾ This option needs to be selected when a 5% impedance is needed. The G120X modules are equipped with a DC Choke equivalent to z = 2%.

³⁾ Consult with application team to verify your Remote I/O configuration is compatible with the gateway.
