Siemens charging technology for multiple applications

Enterprises & retailers
- Connection to existing charging management and customer management systems
- Integration into energy and building management solution

Urban gas station networks/Truck stops
- DC fast-charging stations up to 350 kW
- Central energy management and integration of PV and storage technology
- Compact charging system

Parking garages
- Connection to existing charging management and customer management systems
- Integration into energy and building management solution

Highway transit charging
- 80 percent battery level in less than 15 minutes ("Charging like refueling")

Fleets with depot & opportunity charging
- Charge management optimized for driving operation
