Take a step into the future with SIMOCODE pro

The motor management system for safety, transparency and efficiency. Connected to the Cloud.
SIMOCODE pro. A long-established synonym for motor management.

People today use the word SIMOCODE to mean “motor management and control devices” because, among specialists, SIMOCODE has long since become a generic term for this technology. Because SIMOCODE pro is uncomplicated and easy to use. Because you can rely on SIMOCODE pro over many, many years. And because SIMOCODE pro always leads the field from a technological viewpoint. As it is doing now with its interface to the Cloud.
Flexible, modular, integrated.
The way modern motor management should be.

For 30 years now, SIMOCODE pro has been controlling and monitoring low-voltage, constant-speed motors all over the world. Wherever motors keep things running in the process industry, SIMOCODE is there. Many thousands of times over. Now even more powerful thanks to connection to the Cloud.

The highlights of SIMOCODE pro

- Extensive protection, monitoring and control functions, independent of the automation system
- Detailed operational, service and diagnostics data – at any time or place
- Safe shutdown of motors
- Scalable, flexible solutions for all plant configurations
- Versatile, open communication via various bus systems and protocols
- Integration in process control systems such as SIMATIC PCS 7

SIMOCODE pro offers multifunctional, solid-state full motor protection. The motor management system monitors, protects and controls constant-speed motors and enables the implementation of predictive maintenance. It does not wait for a problem to occur before shutting down the motor, but establishes a level of transparency in advance. This avoids plant standstills and improves economic efficiency.

SIMOCODE pro delivers detailed operating, service and diagnostic data from across the entire process. The engineering is simple and likewise the integration into process control systems. SIMOCODE pro communicates via PROFIBUS and PROFINET, Modbus, EtherNet/IP and OPC UA. It implements simple and economical motor management.

With both the SIMOCODE pro General Performance and SIMOCODE pro High Performance device classes, we offer scalable, flexible solutions for industrial controls and plant optimization in the context of Industrie 4.0.
SIMOCODE pro – General Performance:
Ideal for the entry level

The smart and compact motor management system for direct-on-line, reversing, and star-delta (wye-delta) starters or for controlling a motor starter protector or soft starter. The basic system includes a current measuring module and the basic unit for overload or thermistor motor protection, for example. Communication with the automation level takes place via PROFINET or OPC UA. Optional additions include an operator panel and an expansion module that allows additional inputs/outputs, ground-fault detection and temperature measurement to be realized.

SIMOCODE pro – High Performance:
The fully professional solution for every motor

The SIMOCODE pro High Performance motor management system is variable, intelligent and can be adapted individually to suit every requirement. The basic system includes a module for measuring current (and optionally also voltage), as well as a basic unit, and is suitable for removing pump blockages, for example. Communication with the automation level takes place via PROFINET or Modbus RTU, via Ethernet with the PROFINET or EtherCAT protocols, and also via OPC UA. The optional expansions available include separate current/voltage measuring modules for dry-running protection, an operator panel with display, a ground-fault module, a temperature module, standard digital modules, fail-safe digital modules and an analog module.
SIMOCODE pro Safety: Fail-safe expansion modules

Various modules are available for SIMOCODE pro for the extended protection of personnel, machines and the environment. These guarantee the safety-related shutdown of motors and meet all the requirements of the standards.

The advantages:

- Functional switching and fail-safe shutdown without manual wiring or additional effort
- Safety function parameters can be flexibly configured
- Transfer of meaningful diagnostic data to the control system
- Logging of errors for detailed evaluation
- Fail-safe shutdown via PROFIsafe
Remove pump blockages and increase availability.

Say goodbye to blocked pumps with SIMOCODE pro – the modular, compact motor management system that tackles the challenge by automatically reversing the pump. Another benefit: SIMOCODE pro can be retrofitted in existing plants.

Every water utility is familiar with the problems of a blocked pump – and the possible consequences: environmental harm, damage due to flooding, and dangers to health as a result of lifting and cleaning pumps. This is compounded by the financial impact of plant downtimes. SIMOCODE pro monitors the current and active power of the pump motor – and derives the pump status from them. If a defined threshold value is exceeded, SIMOCODE pro autonomously reverses the rotational direction of the pump in order to dislodge deposits on the impeller blades, for example.

SIMOCODE pro – The advantages at a glance

- Minimized downtimes – with less maintenance work
- Energy and cost savings over the entire plant life cycle
- Simple use
- Scalable solution
- A choice of networked or autonomous configuration
Reliable monitoring. Dry-running protection reconceptualized.

Reliable dry-running protection is a must in many applications in the chemical industry. SIMOCODE pro reliably prevents the dry running of centrifugal pumps in order to preclude hazardous situations – and completely redefines dry-running protection for pumps in hazardous areas with an innovative solution.

Sensors on centrifugal pumps in hazardous areas are often prone to fault and are thus high-maintenance. The solution: Using active power-based dry-running detection, SIMOCODE pro monitors the active electrical power consumption of the pump motor and thus the status of the pump – without the need for additional monitoring devices or sensors to be installed. The new technology ensures reliable explosion protection in accordance with ATEX and IECEx criteria and saves costs and time for commissioning and maintenance.

Your benefits through active power-based dry-running protection

Earlier fault detection
- Direct conclusions concerning the flow rate can be drawn from the active power consumption of the pump motor
- Reliable prevention of dry running of the pump and therefore less damage to the pump

Cost and time savings
- No maintenance effort due to the elimination of mechanical wear of the sensors
- No additional sensor required

Reduction of hardware
- No need for additional sensors and mechanical components
- Simplified engineering

Reliable monitoring of the system
- Compliance with ATEX and IECEx criteria
- Reliable and automatic pump shutdown in the event of inadmissible operating conditions
SIMOCODE pro speaks to everyone. Including the Cloud.

With the OPC UA industrial M2M communication protocol, SIMOCODE pro provides an additional communication interface that is independent of the automation system.

The open and supplier-independent communication via OPC UA guarantees the direct exchange of data with HMI panels or SCADA systems. Motor, process and plant data is therefore available without any losses, wherever it is needed: at the switchboard, but also in the control room for diagnostic purposes. As part of the digital revolution and the efforts to evaluate vast quantities of data even more quickly, all feeder data from SIMOCODE pro can be transmitted by the most direct route to the Cloud using OPC UA.

The data can then be used more intensively and in a targeted fashion – without the need for any intervention in the control. The result: Plant availability and economy are increased, because you can run analyses, improve energy consumption, or even optimize the entire process.

Benefits

Thanks to OPC UA, SIMOCODE facilitates simple and convenient integration into Cloud-based solutions, e.g. Siemens MindSphere – with so many advantages:

• Data provision in the Cloud for cross-plant, reliable diagnostics
• Convenient and reliable process optimization
• Plant-wide access to control data, process values and readings without complex engineering effort
• Predictive maintenance, energy data management and resource optimization
• Effective protection against manipulation (security)
SIMOCODE ES: For diagnostics and simple configuration, including in the TIA Portal

SIMOCODE ES provides you with the software for the configuration, startup, operation and diagnosis of SIMOCODE pro. The software is based on the central Totally Integrated Automation Portal (TIA Portal) engineering framework, providing an integrated, efficient and intuitive solution for all automation tasks. SIMOCODE ES offers you a host of advantages, including convenient configuration in the device view, graphical commissioning using drag and drop functions, presentation of signal states online, or clear measurement curves for diagnostic purposes.

The convenient way to optimum process guidance: The integration of SIMOCODE pro into SIMATIC PCS 7

Using standardized blocks and faceplates, SIMOCODE pro can very easily be integrated into the SIMATIC PCS 7 process control system. This makes it extremely easy to integrate service and diagnostic data from the motor management system into higher-level process control systems, for example.

The result: A high level of transparency throughout the plant, enabling faults to be detected at an early stage or prevented from occurring altogether. In general, the greater density of information in the control system enables you to achieve not only greater transparency, but also higher process quality.

Benefits

SIMOCODE pro is your reliable data supplier for maximum process quality. The motor management system offers:

- Data analysis and simulation
- Secure data storage and transmission
- Visualization and recommendation(s)
- Increased availability of components
- Optimization of energy consumption
- Maximization of process efficiency
SIMOCODE pro system overview – General Performance

**Basic units**
- **SIMOCODE pro S**
  - 24 V DC
  - 110 ... 240 V AC/DC
  - 3UF7020-1AB01-0
  - 3UF7020-1AU01-0

- **SIMOCODE pro V PN GP**
  - 24 V DC, 2 ports
  - 110 ... 240 V AC/DC, 2 ports
  - 24 V DC, 1 port
  - 110 ... 240 V AC/DC, 1 port
  - 3UF7011-1AB00-1
  - 3UF7011-1AU00-1
  - 3UF7011-1AB00-2
  - 3UF7011-1AU00-2

**Expansion modules**
- **SIMOCODE pro S multifunction modules**
- Monostable relay outputs, input voltage
  - 24 V DC
  - 110 ... 240 V AC/DC
  - 3UF7600-1AB01-0
  - 3UF7600-1AU01-0

**Connection cables**
- 3UF793x-0AA00-0 connection cables available in various versions from 0.025 m – 0.5 m

**Current measuring modules**
- Straight-through transformers
  - 0.3 ... 3 A
  - 2.4 ... 25 A
  - 0.3 ... 3 A (options)
  - 2.4 ... 25 A (options)
  - 45 mm
  - 45 mm
  - 3UF7100-1AA00-0
  - 3UF7101-1AA00-0

- Busbar connections
  - 20 ... 200 A
  - 63 ... 630 A
  - 120 mm
  - 145 mm
  - 3UF7103-1BA00-0
  - 3UF7104-1BA00-0

**Expansion modules**
- **Digital modules**
- Relay outputs
  - Input voltage
    - 24 V DC
    - 110 ... 240 V AC/DC
    - 3UF7300-1AB00-0
    - 3UF7300-1AU00-0

- Ground-fault module
  - 3UF7510-1AA00-0

- Temperature module
  - 3UF7700-1AA00-0

**Operator panel**
