Customized for maximum demands

SIVACON S8 low-voltage power distribution board: safe, flexible, efficient

siemens.com/sivacon-partner
In industrial plants, buildings, and infrastructure, even a small disturbance in the power supply can cause serious damage – not only to industrial and building operations but also to people. That is why the standards for safe power distribution are so high.

In addition, today’s increasingly automated and digitized production processes and buildings require increasingly adaptable power distribution. They need a flexible layout, high availability, and personal and plant safety.
Our products and systems support the safe, flexible, and efficient implementation of power distribution planning, design, and operation. The SIVACON S8 low-voltage power distribution boards and SENTRON components are tried-and-true and perfectly compatible.

This not only helps to significantly reduce investment costs and risks: It also increases plant availability throughout the entire period of use.

**Conforming to standards: IEC 61439**

As of 2014, all low-voltage switchgear and control gear assemblies in the European Economic Area must conform to the IEC 61439 standard.

This standard describes distinct areas of responsibility. Specifically, it divides the tasks between an "original manufacturer" and a "manufacturer of a switchgear and control gear assembly". The original manufacturer (such as Siemens) is the company responsible for the original design and the associated verification of the switchgear and control gear assembly in accordance with the relevant standard.

With a SIVACON S8 low-voltage power distribution board, customers are always on the safe side: It is design-verified according to the IEC 61439-1/2 standard. In addition, it disposes of the shipping approvals according to LR, DNV-GL and ABS.
Benefits

• Emphasis on maximum personal and plant safety
• Flexible layout thanks to a modular concept and wide variety of parts
• Efficient implementation of technologically sophisticated solutions

SIVACON S8: for maximum demands

Safe down to the last detail
The SIVACON S8 low-voltage power distribution board ensures a high level of personal and plant safety. Continuous testing to IEC 61641 and VDE 0660 Part 500-2 guarantees safety in the event of an arcing fault. Many well-thought-out details, including a reduced use of plastic parts and insulated main busbars, guarantee maximum safety and plant availability, resulting in low liability risk.

Flexible and adaptable
Thanks to its modular concept and wide variety of components, the SIVACON S8 low-voltage power distribution board can meet all individual requirements. For instance, the profile bar or flat copper design of the vertical section busbars allows for tap-offs in the smallest of grids. The switching device holders are also modular, with a graduated depth.

Efficient throughout the entire process
Over 404,000 switching boards have already been launched on the market by SIVACON Technology Partners – proof that technologically sophisticated solutions can be efficiently implemented with the SIVACON S8 low-voltage power distribution board. Power distribution is easy to plan, and the distribution board can be quickly configured using the SIMARIS software tools. The result: time savings and planning reliability throughout the entire process.

SIVACON S8 –
8 good arguments for safety

The SIVACON S8 low-voltage power distribution board ensures a high level of personal and plant safety – at all times and everywhere.

1. Design verification by verification test in accordance with IEC 61439-1/-2
   • Design-verified connection to the SIVACON 8PS busbar trunking system

2. High level of personal safety thanks to roof plate with pressure relief

3. Comprehensive certifications
   • High degree of test coverage
   • Certifications for use on ships and offshore platforms
   • Earthquake upgrade

4. The patented locking system or simple or central locking keeps doors closed even in the event of an arcing fault.
Safety in the event of an arcing fault, thanks to testing in accordance with IEC 61641 and VDE 0660 Part 500-2: restriction of the effects of the arcing fault

- Within the power distribution board
- To a section
- To a compartment

An arcing fault barrier restricts the effects to one section when an arcing fault occurs.

The insulated main busbars prevent the occurrence of arcing.

Safe housing
- Frame made from stable sheet-steel profiles
- Sendzimir-galvanized surfaces on frame components, bases, rear panels, and floor plates
# SIVACON S8 – 8 good arguments for flexibility

Thanks to its modular concept and wide variety of parts, SIVACON S8 can meet the most demanding requirements and satisfy all individual needs.

High level of flexibility thanks to innovative modular technology

- Different installation designs can be combined in one section
- Functional units are easy to exchange or add

The functional compartments can be divided as required with add-on modules.

Depending on requirements, different degrees of protection can be implemented with the roof plate – ventilated or non-ventilated.

The universal door hinge allows the hinge side to be easily changed.
SIVACON S8 – 8 good arguments for efficiency

The SIVACON S8 low-voltage power distribution board permits the efficient implementation of technologically sophisticated solutions. The proof: Over 404,000 switching boards have already been installed in a wide variety of applications by SIVACON Technology Partners.

1. **Economical design**
   - Circuit breaker section provides enough space for up to three circuit breakers
   - Flexible installation design: fixed-mounted or withdrawable design for easy maintenance

2. **Efficient, flexible operation**
   - High packing density with up to 35 outgoing feeders per section
   - Fast exchange under operating conditions

3. **Reduced service time** thanks to maintenance-free section connections

4. The **patented ventilation slots** reduce maintenance effort.
   - Cleaning is possible with the door closed and from the outside
   - Low repair costs
The patented connection terminals are safe, flexible, and easy to connect – during installation and in the event of subsequent changes.

Reliable partners

- Maximum technological progress through constant innovation guarantees the highest quality
- Brand strength combined with expertise gained over many years and the availability of a local partner on-site

The SIMARIS software tools save time throughout the process – from planning to configuration all the way to plant documentation.

The innovative, communication-capable SENTRON components are easy to integrate

- System status and energy flows are made transparent
- For energy-efficient plant operation
Connection to energy management, control, and automation systems

**Benefits**
- System status and fault prevention are made transparent
- Increase plant availability
- Identify potential savings with transparent energy flows
- Reduce energy costs

Analyze data, reduce energy costs, increase plant availability

For industrial plants to operate efficiently, their load must be constantly optimized and downtime reduced. The 7KM/7KT PAC measuring devices and communication-capable 3WL/3VL/3VA circuit breakers integrated in the power distribution board can help you achieve this.

They precisely and reliably record energy values for electric feeders or individual loads and display the values on-site. The communication-capable devices supply important measured values via standardized bus systems for the purpose of assessing the system status and power quality.

Data can be visualized and managed via measuring devices with an integrated web server and the powermanager power monitoring software.

The measured data of the devices can easily be processed in higher-level automation and energy management systems as well as cloud applications. Because only by knowing your energy consumption you can reduce energy costs and ensure optimal system operation.

**Different communication options depending on the device**

- Modbus TCP
- Modbus RTU
- Profinet
- Profibus
- Analog/digital

**Switching and protection devices**
- Energy measurement
- Status information
- Remote control

**Measuring devices**
- Energy measurement with up to 1% accuracy
- Power measurement with up to 0.5% accuracy
- Power quality with up to 0.2% accuracy
- MID
- THD
- Harmonics

**SENTRON components in the SIVACON S8 power distribution board**
The HAWE Hydraulik SE group of companies, with headquarters in Munich, develops and manufactures hydraulic components and systems.

Requirements

- Safe power distribution in HAWE Hydraulik SE’s largest plant in Kaufbeuren, Germany: four halls with 30,000 m² production area
- Uninterrupted power supply for state-of-the-art manufacturing and assembly technology
- Maximum reliability of electrical equipment
- Energy-efficient production and building systems

Solution

The new plant needed a comprehensive safety concept to be developed to supply it with power. The decision to use Siemens systems and components was based on both the overall concept and the high technical quality. With the participation of a SIVACON Technology Partner and an electrical planner, a comprehensive, uniform solution was developed that integrates both medium-voltage switchgears and low-voltage power distribution boards. Precisely coordinated products and systems as well as technical support services guarantee continuous and therefore highly efficient and reliable power distribution.

Products employed

- 80 boards of SIVACON S8 low-voltage distribution boards
- 8,000 meters of SIVACON 8PS busbar trunking systems
- 30 boards of gas-insulated medium-voltage switchgear type 8DJH
- 13 GEAFOL cast-resin transformers

Result

As a design-verified low-voltage switchgear and control gear assembly in accordance with IEC 61439, the SIVACON S8 low-voltage power distribution board and 8PS busbar trunking systems guarantee high operating safety and short-circuit strength with a negligible fire load. Overall, power distribution in the new plant meets the highest demands for safety, reliability, availability, and efficiency.
